BILLION NOK
REVENUES IN 2022

Creating sensor-based solutions for optimal resource productivity - transforming how we obtain, use, and reuse resources

Collection

Recycling

Food

Publicly listed on Oslo Stock Exchange (OSEBX: TOM)

Leading market position

50 years of know-how

TOMRA is uniquely positioned along powerful global megatrends

Best-in-class technology

Purpose-driven employees

Our vision is to Lead the Resource Revolution

It is our belief that businesses have the power and responsibility to help manage our planet's precious resources – today and tomorrow.

TOMRA

TOMRA's transformation journey

mergers and acquisitions

2004 TITECH

TOMRA acquires TITECH, the world's leading provider of optical recognition and sorting technology for the waste industries and TOMRA's transformation journey starts.

2005 Orwak

TOMRA acquires Orwak Group, a leading provider of compaction for a variety of materials.

2006 Commodas

TOMRA acquires Commodas - a leading supplier within the field of sensor-based products for mining and metal recycling.

2008 Ultrasort

TOMRA acquires Ultrasort - specialists in sensor-based mining technology.

2011

Sale of Californian material handling business. With the divestment the US operation became less exposed to movements in commodity prices.

2011 Odenberg

TOMRA acquires Odenberg, rounding out the offering to include food optimization.

2012 BEST

TOMRA acquires BEST, leading food sorting machine producer. With the acquisition of BEST, TOMRA has by far the widest reach within the food sorting universe.

2014

Divestment of Orwak. Further portfolio focus on sensor-base technology.

2016 Compac

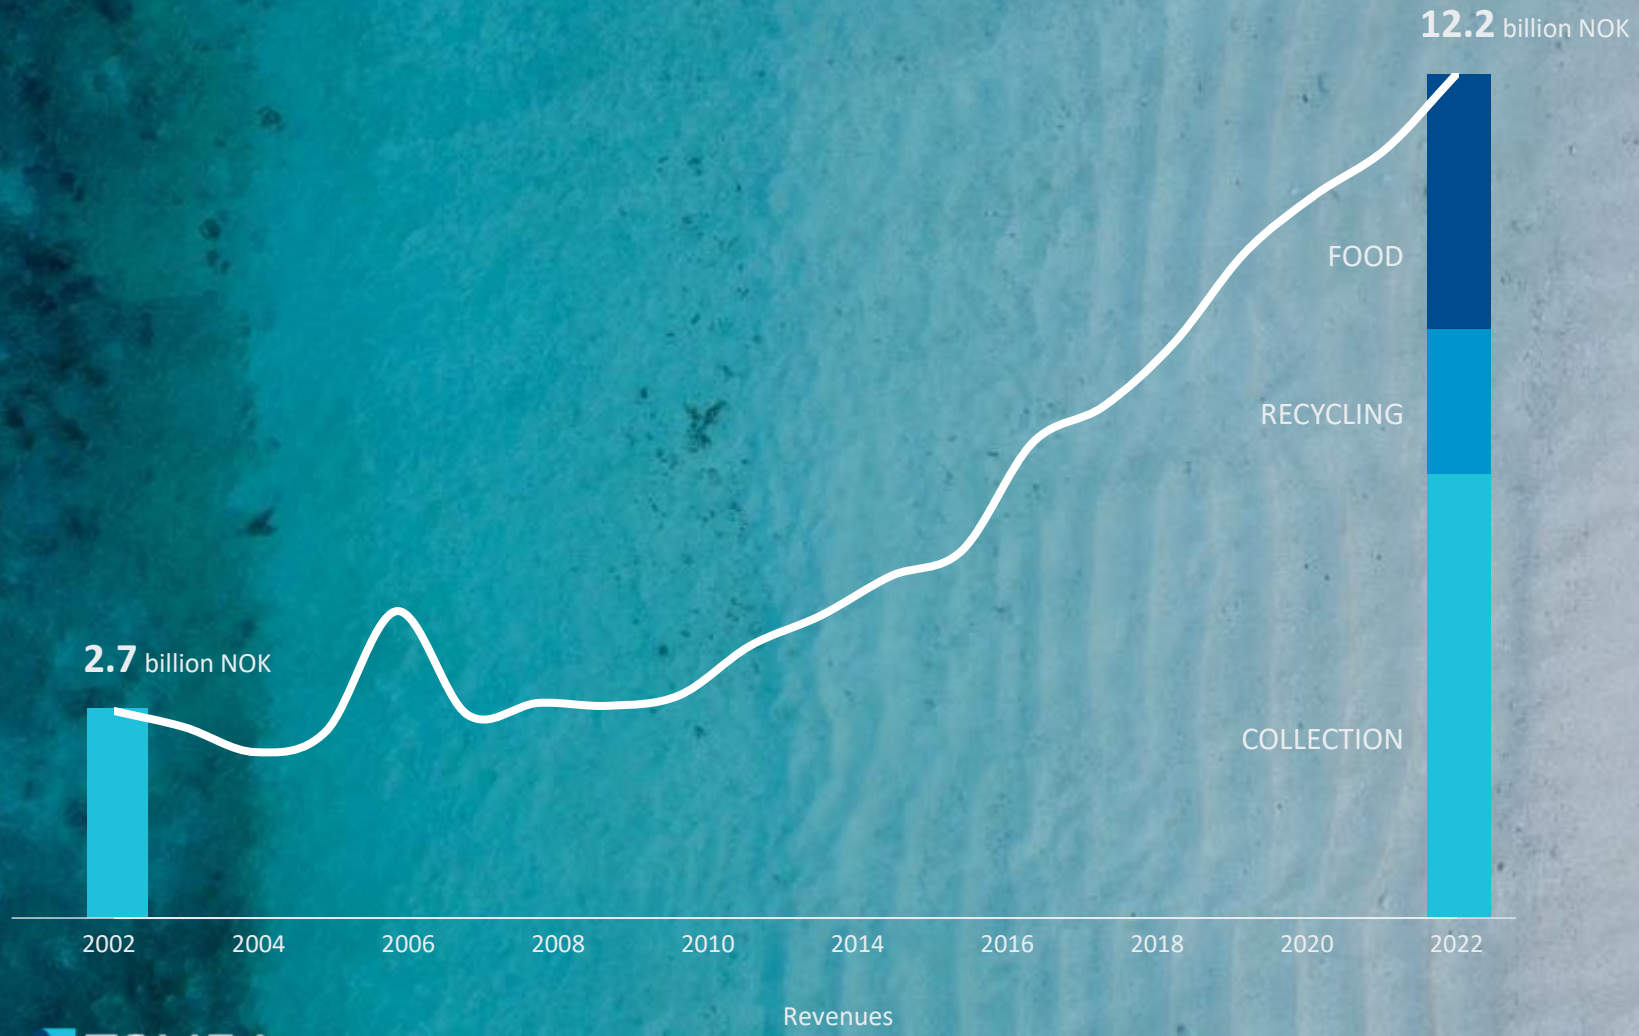
TOMRA expands into lane sorting, acquiring New Zealand based Compac, confirming TOMRA's position as the leading provider of sorting technology into the food industry.

2018 BBC Technologies

TOMRA complements its food sorting portfolio with the acquisition of BBC Technologies, a leading provider of precision turnkey solutions for blueberries and other small fruits.

TOMRA

TOMRA Collection | TOMRA Recycling | TOMRA Food



TOMRA

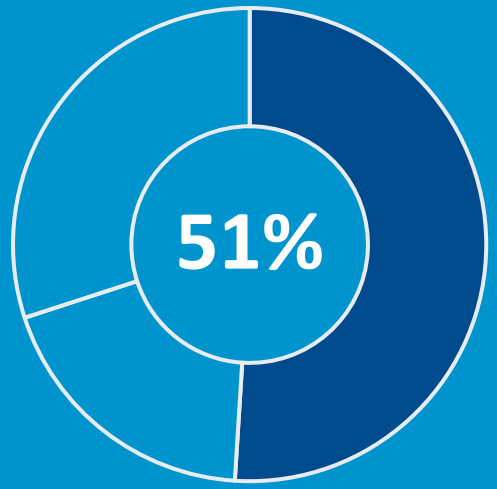
We have built a broad business platform…

… while keeping a strong entrepreneurial spirit

Creating value through three divisions

TOMRA Collection

2022 Revenue



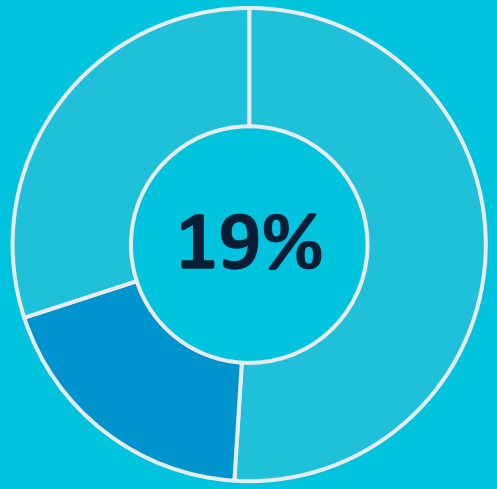
~2,600
Employees

Customers

Grocery retailers, bottlers, deposit scheme coordinators

TOMRA Recycling

2022 Revenue



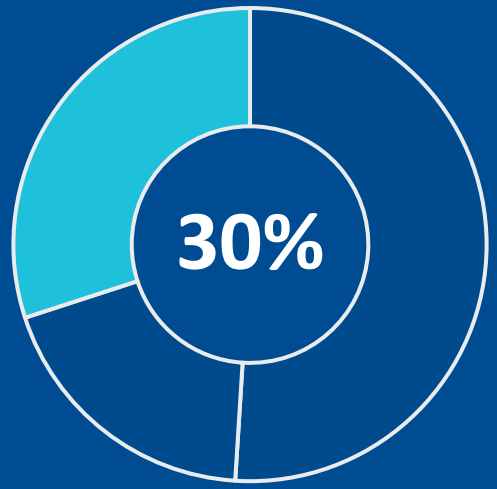
~800
Employees

Customers

Waste management, material recovery plants, recyclers

TOMRA Food

2022 Revenue

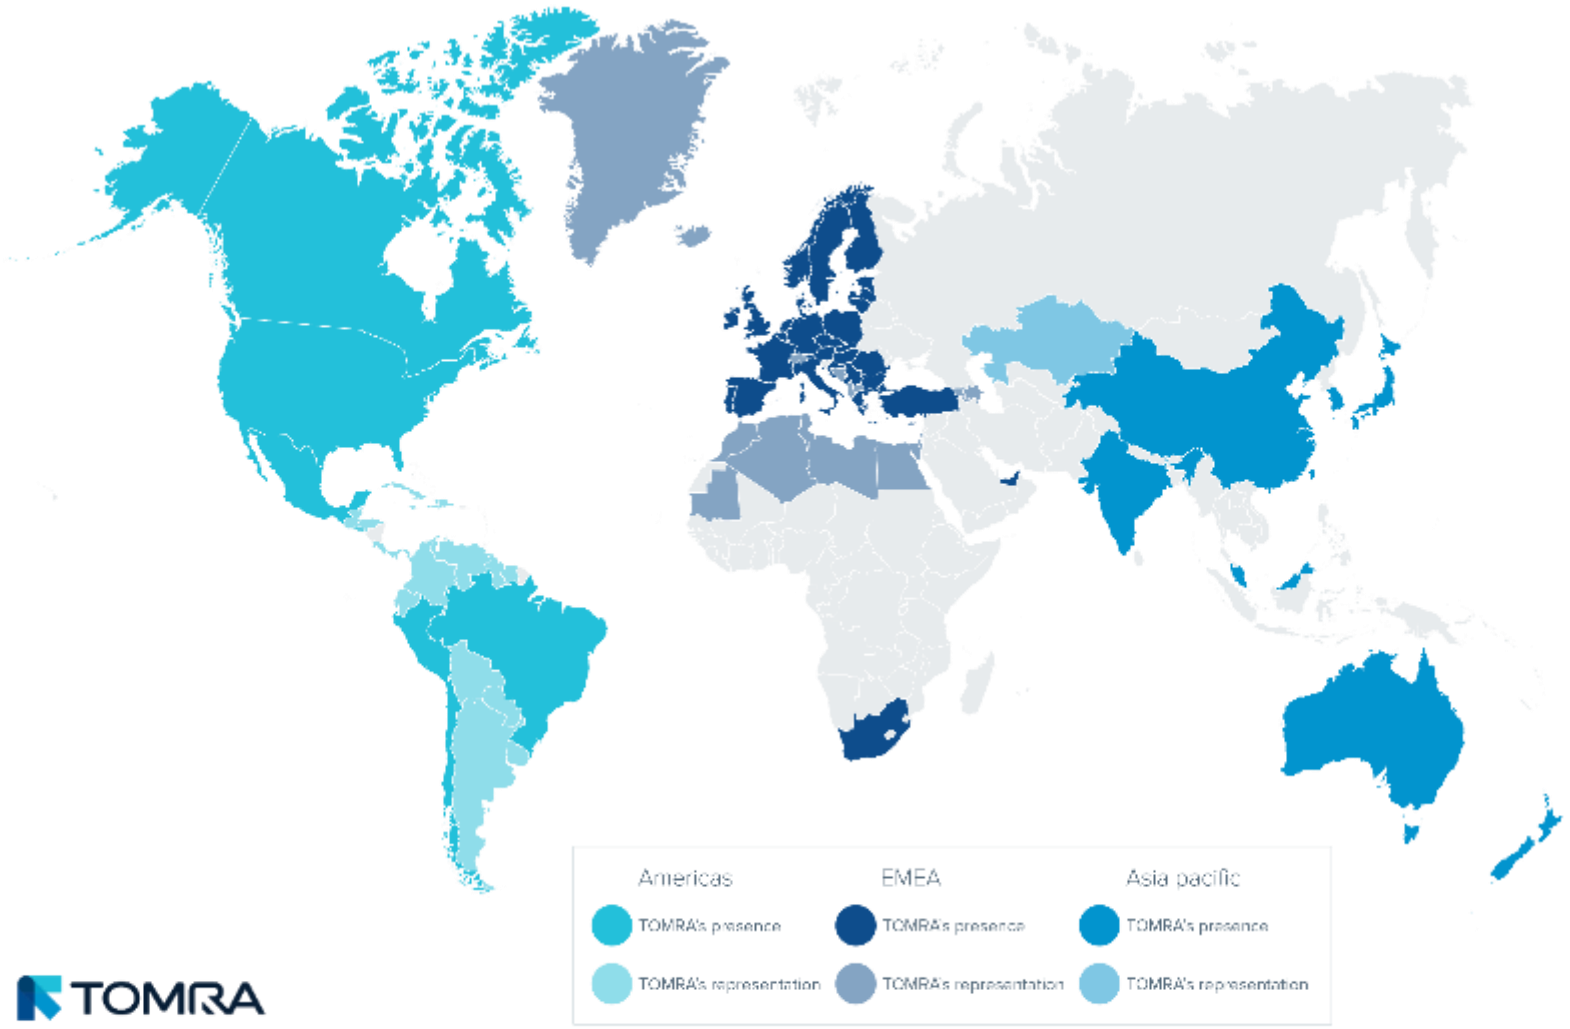


~1,600
Employees

Customers

Food growers, packers, processors & cooperatives

TOMRA's global presence



Installed base ~105,000

EMEA ~75,000

Americas ~22,000

Asia Pacific ~8,000

	Collection	Recycling	Food
EMEA	~63,000	~6,300	~5,600
Americas	~14,000	~1,400	~6,300

Total	**~82,000**	**~9,000**	**~13,800**

Each year, at least 8 million tons of plastics leak into the ocean.
That’s the equivalent of one garbage truck every minute.
The New Plastics Economy
World Economic Forum (2016)
Location: Vacha Dam, Bulgaria

But the tides are shifting. There's a desire for change…

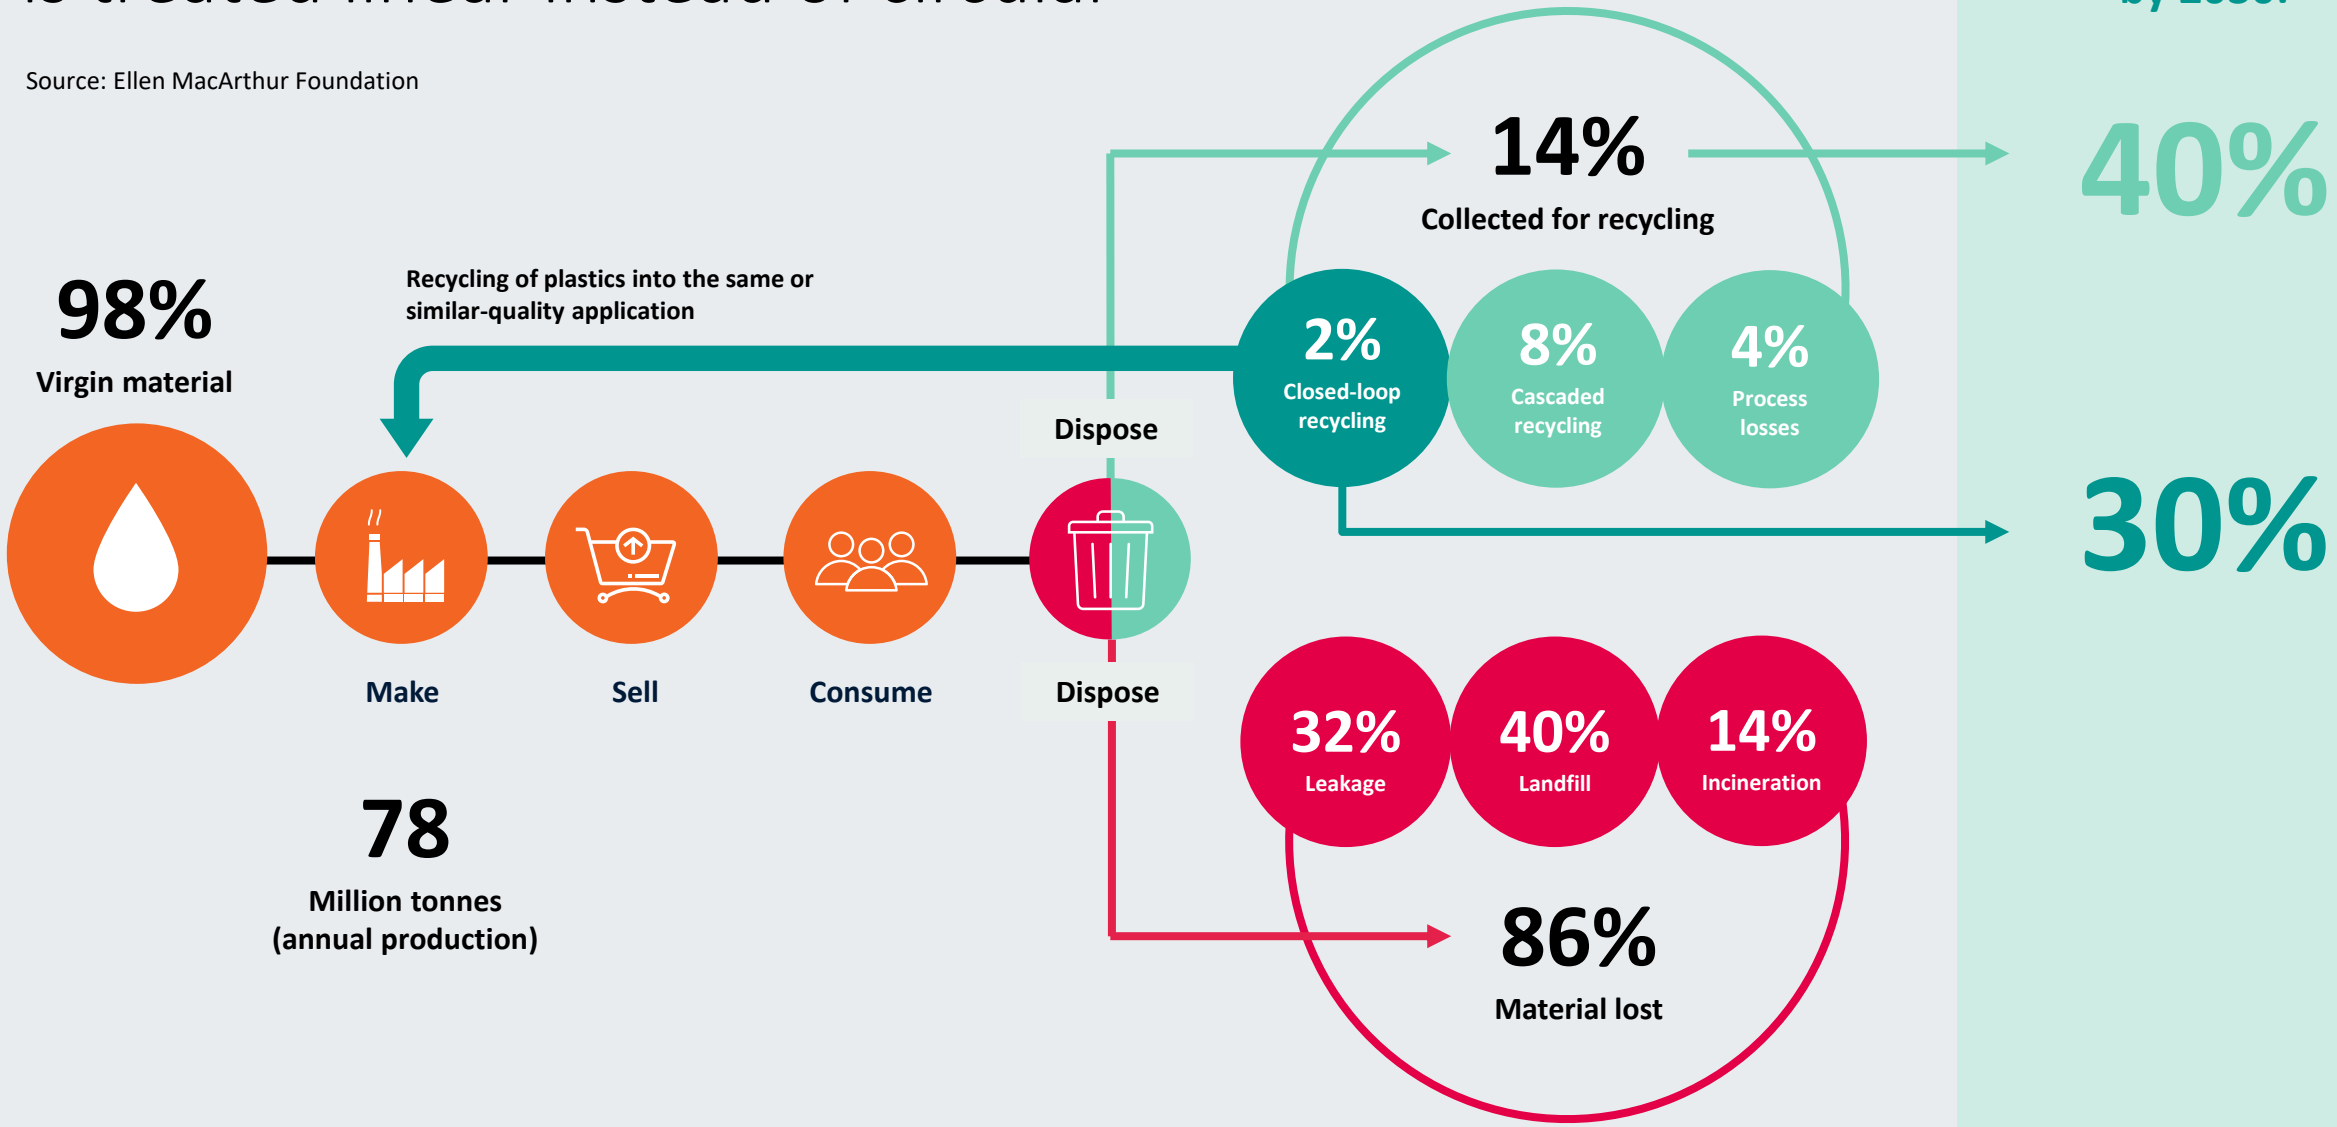
Consumer demand for responsible plastic use options

Legislative push for new plastic waste strategies

Market pull from large brand owners and companies

Today: post-consumer plastic packaging is treated linear instead of circular

Source: Ellen MacArthur Foundation



Our ambition by 2030:

40%

30%

Our experience and technologically advanced solutions help create circular value chains that benefit business and society.

TOMRA Collection

TOMRA Collection

Transforming society’s habits to keep valuable resources in a continuous loop of use and reuse.

~6.2
billion NOK
in revenue

~82,000

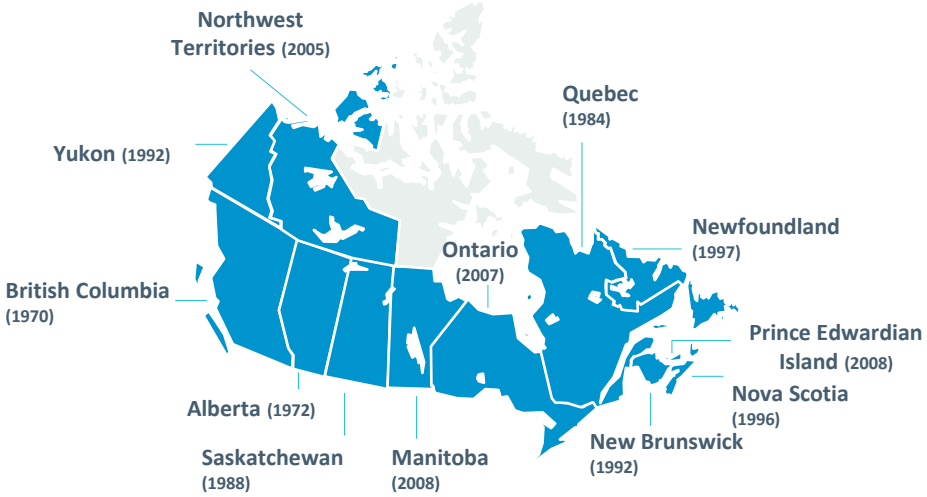
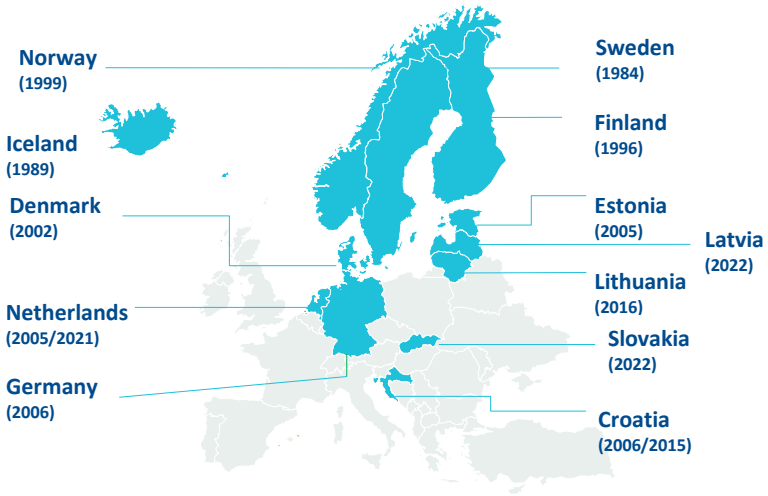
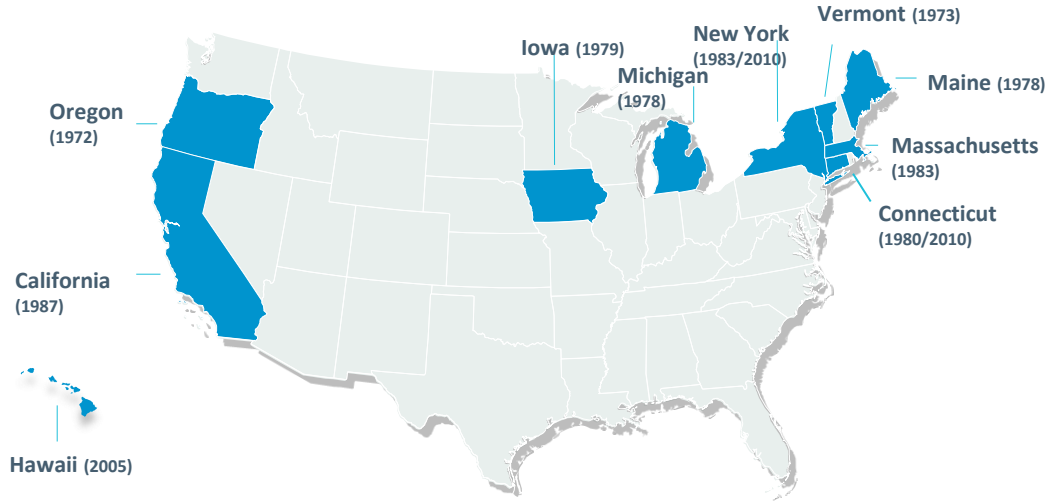
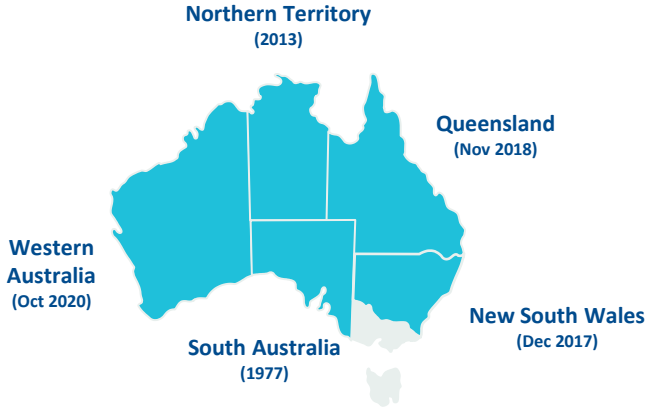
An overview of current deposit markets





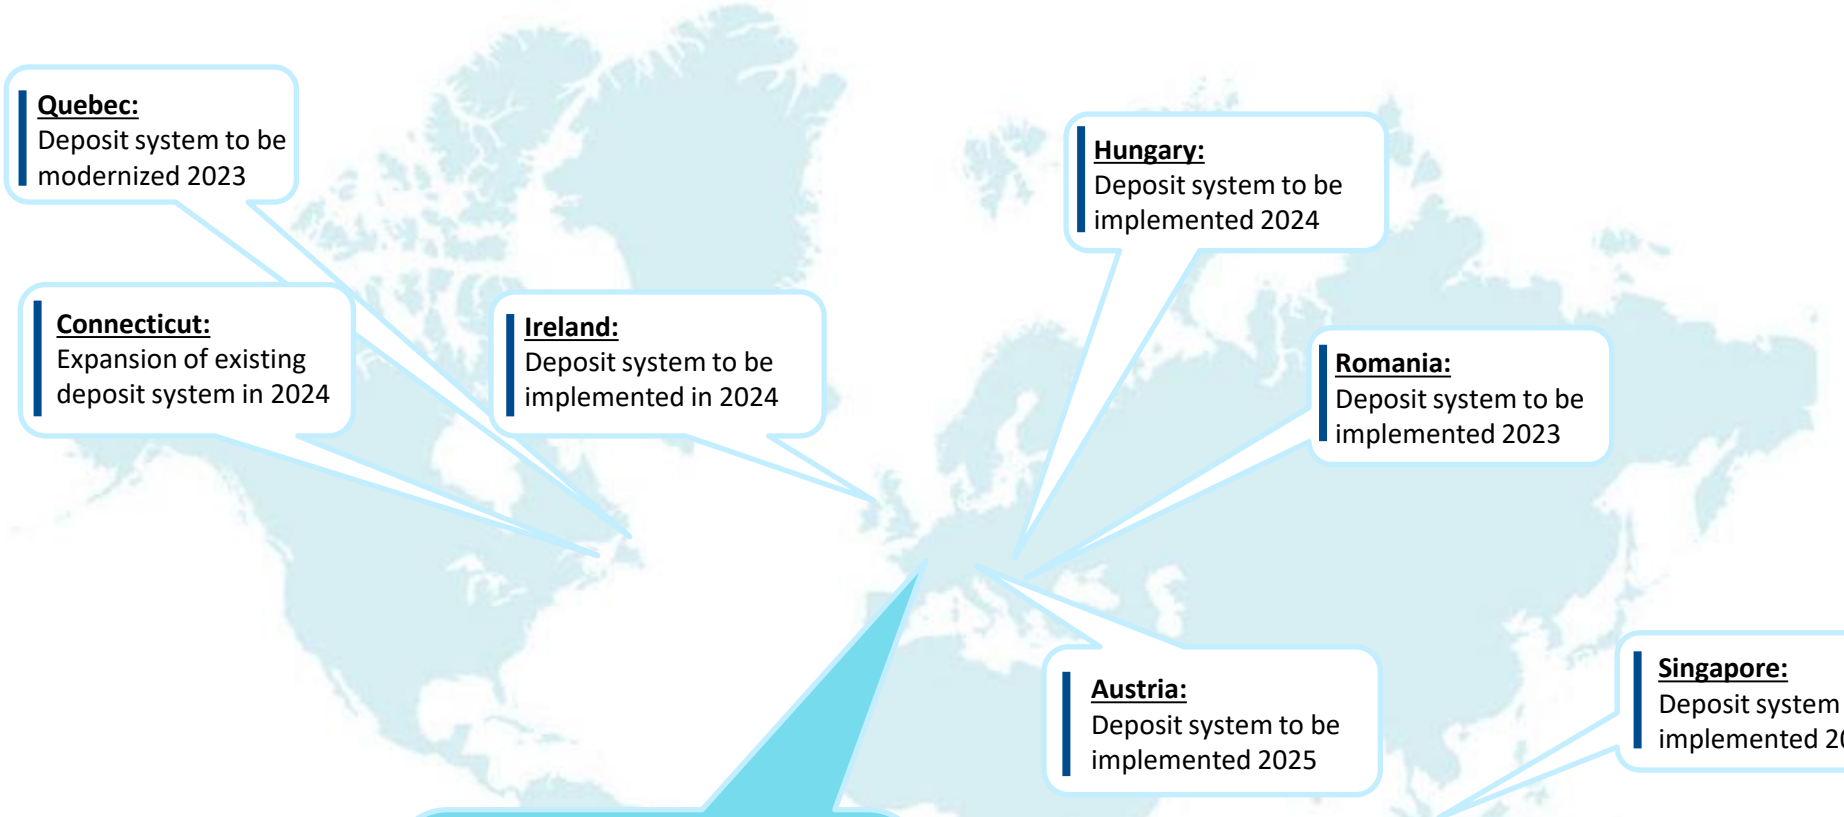




TOMRA

* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Chile, Czech Republic, France, Hungary, Poland and South Korea

Upcoming deposit markets



Quebec:
Deposit system to be modernized 2023

Connecticut:
Expansion of existing deposit system in 2024

Ireland:
Deposit system to be implemented in 2024

Hungary:
Deposit system to be implemented 2024

Romania:
Deposit system to be implemented 2023

Austria:
Deposit system to be implemented 2025

Singapore:
Deposit system to be implemented 2025

Victoria:
Deposit system to start in November 2023

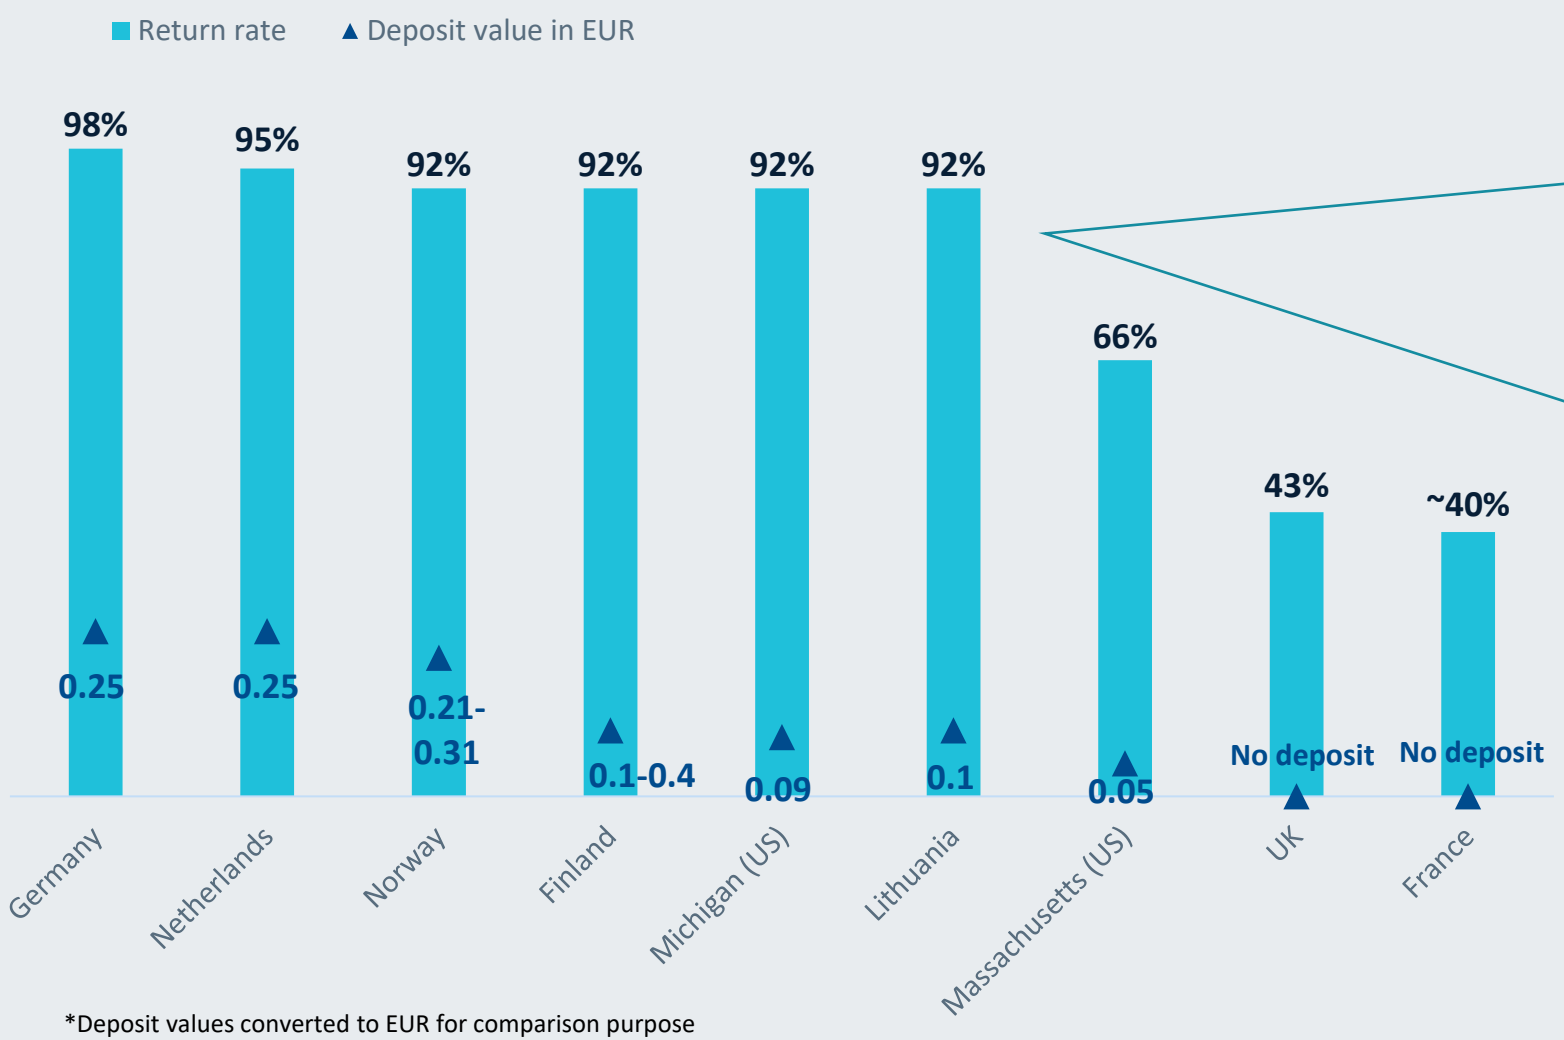
New Zealand
Deposit system proposed for 2025

EU Single-Use Plastic Directive:
Targets on recycled content and collection target for plastic bottles. Deposit scheme mentioned as a mean to reach those targets.

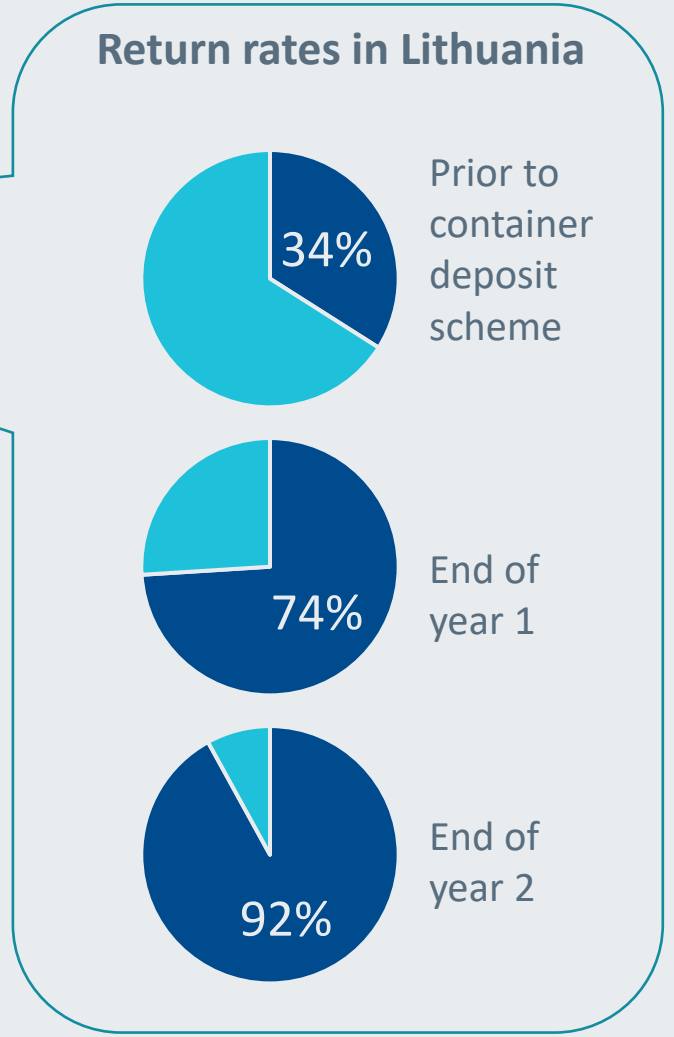
Collection target for plastic bottles:
- 77% by 2025
- 90% by 2029

Recycled content in product design:
- 25% by 2025 in PET bottles
- 30% by 2030 in all plastic bottles

High collection rates achieved in two years' time

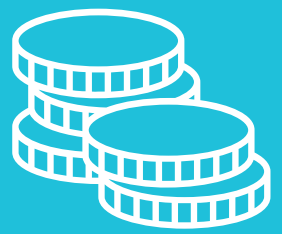


*Deposit values converted to EUR for comparison purpose

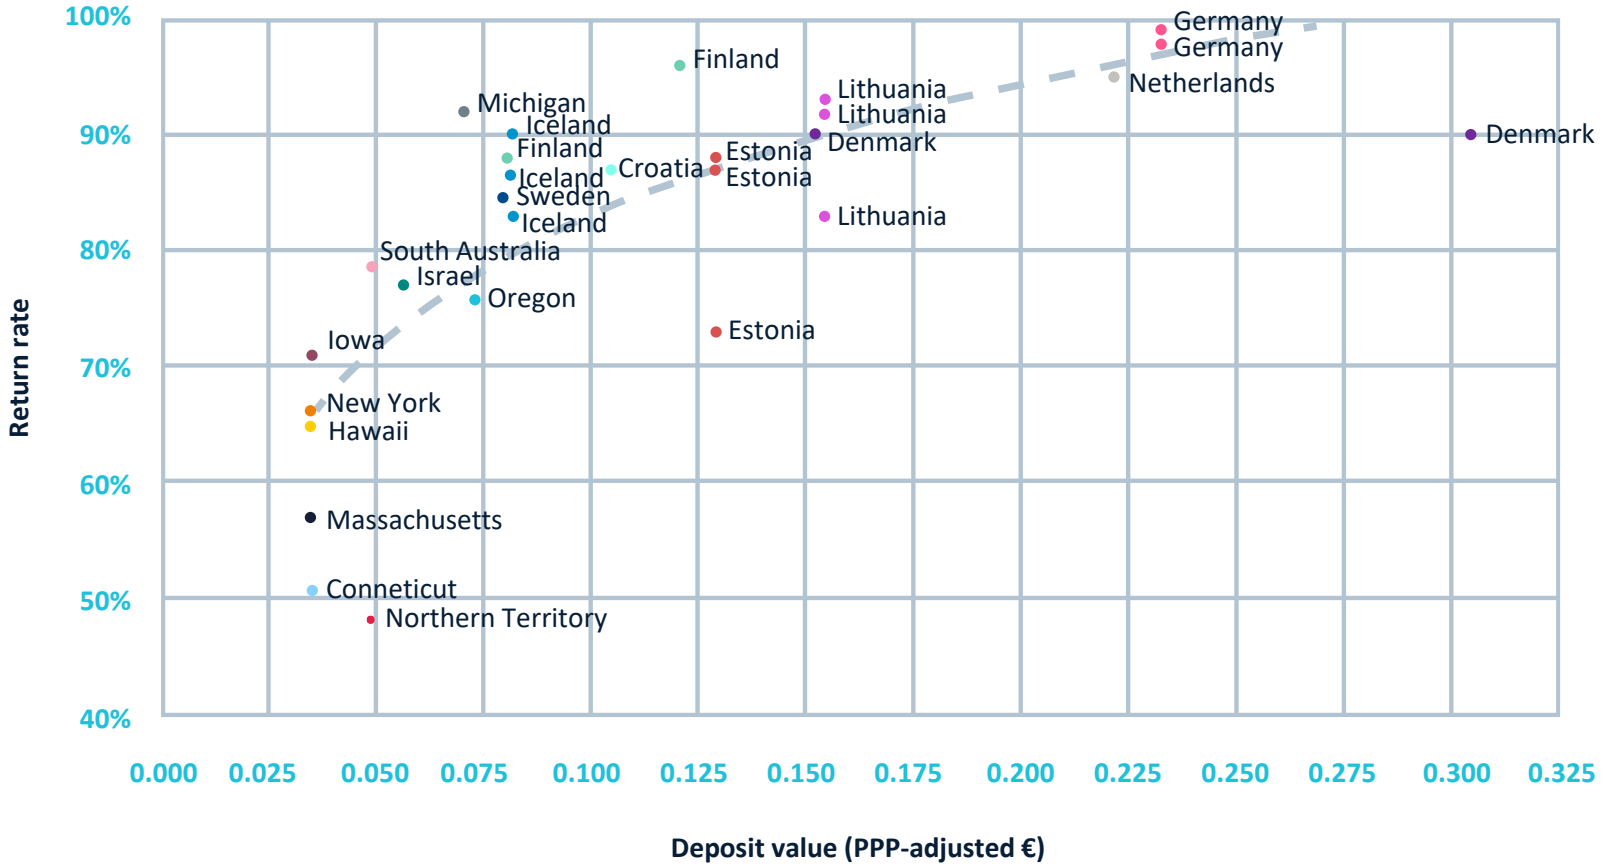


Source: Reloop, The Guardian, LeParisien, USAD

A meaningful deposit value is the strongest driver of results

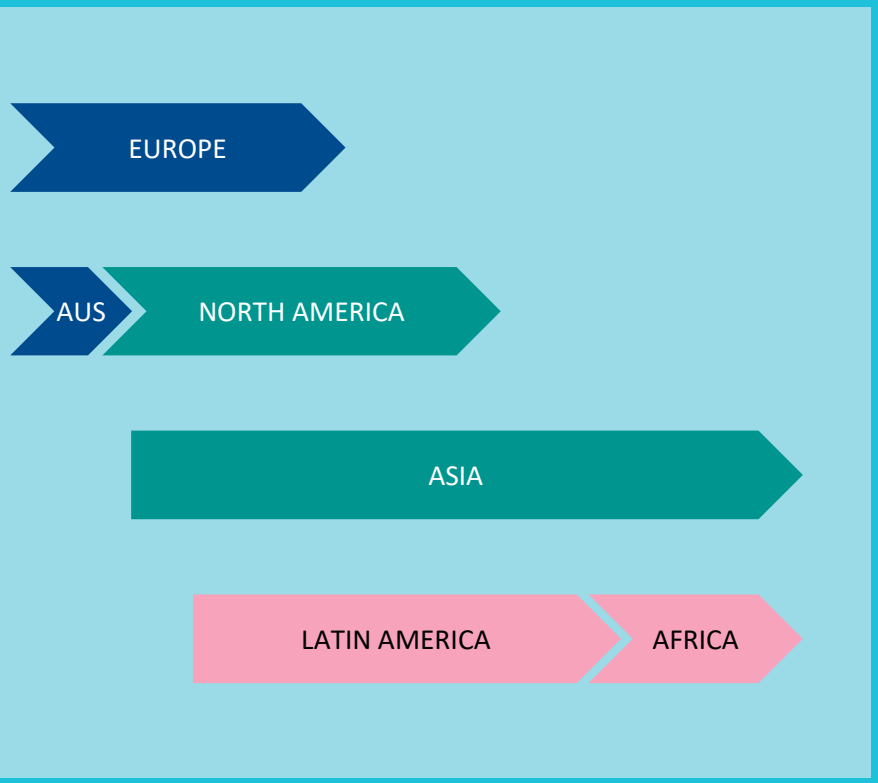


Return rates compared to purchasing power parity-adjusted deposit values - € (2018)



High-performing systems are achieving good results with a deposit of €0.10 (PPP-adjusted)

We are driving the market momentum through global advocacy work aiming to achieve best practice deposit systems and generate demand through innovations



Collection targets for plastic beverage bottles

77% 2025 **90%** 2029

Targets for recycled content in plastic beverage bottles

25% 2025 **30%** 2030

Continued work with governments to implement best practice deposit legislation

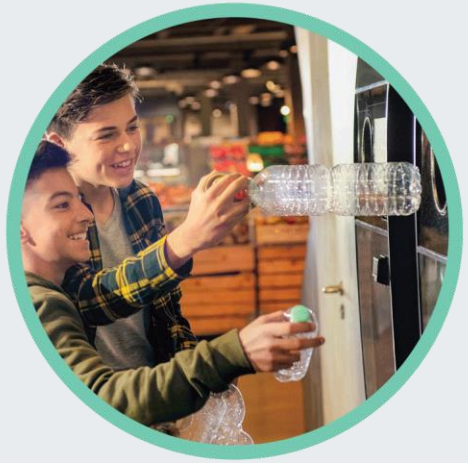
Innovate solutions that trigger modernizations and increased demand

The four principles of high-performing deposit return systems

PERFORMANCE

A collection target for a broad scope of beverage packaging plus a meaningful deposit **delivers strong results**.

CONVENIENCE

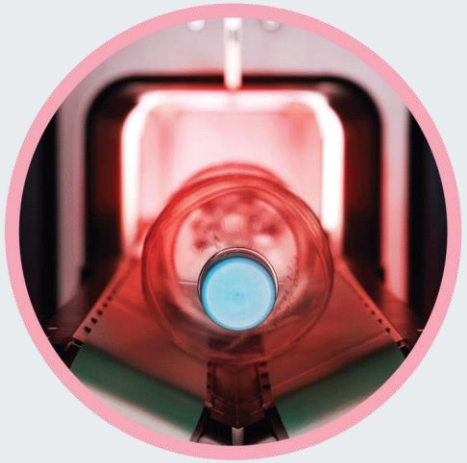


The redemption system is **easy**, **accessible and fair** for everyone.

PRODUCER RESPONSIBILITY

Producers manage, finance and invest in the system with use of unredeemed deposits and commodity revenues.

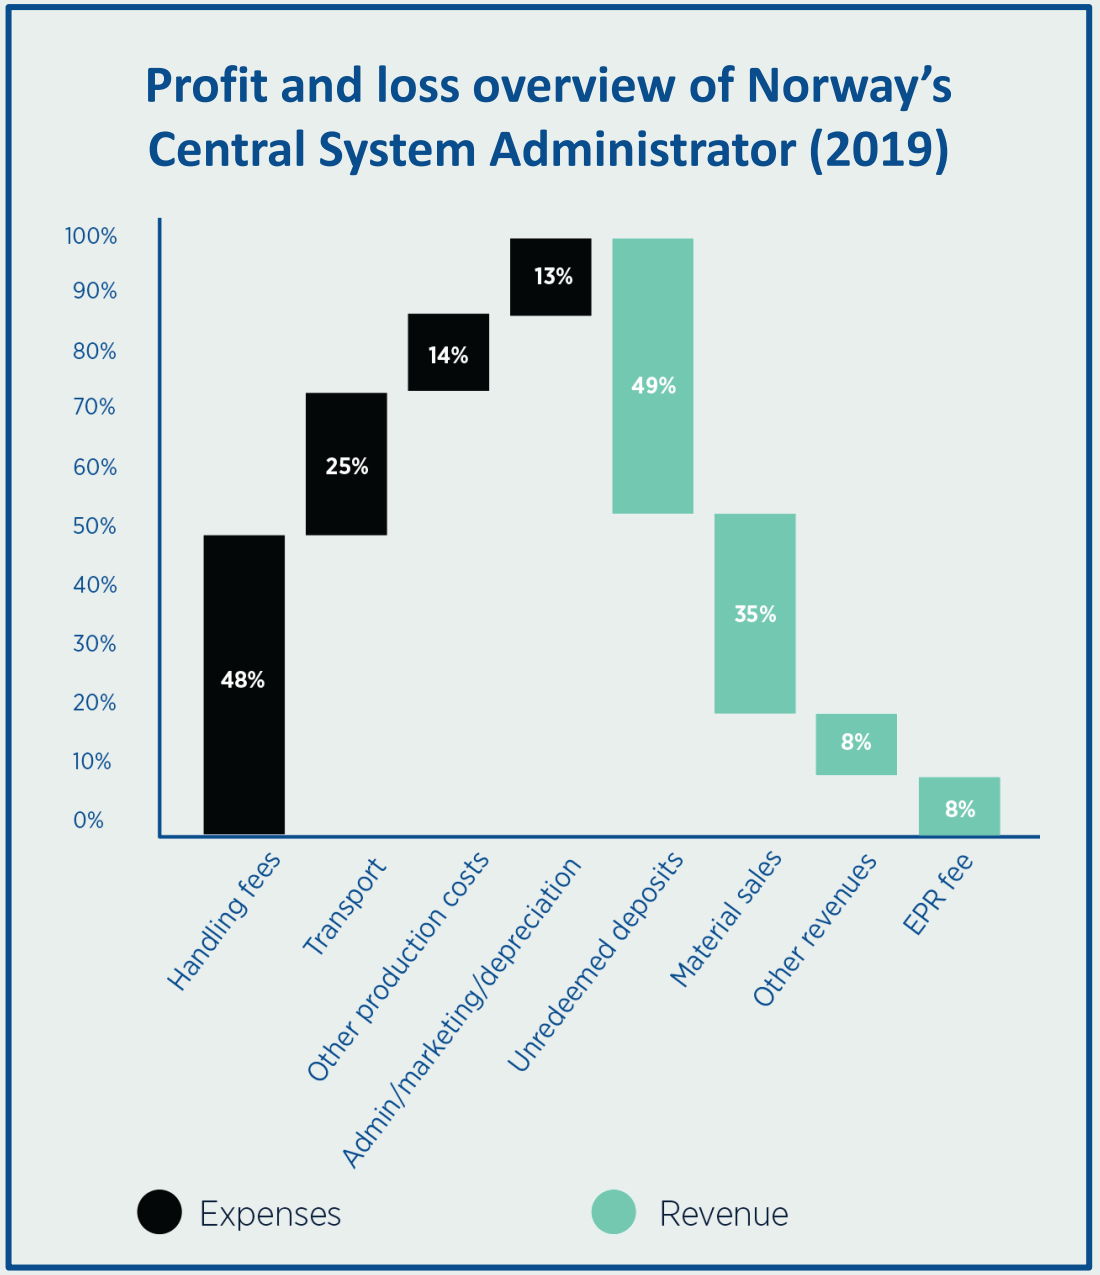
SYSTEM INTEGRITY



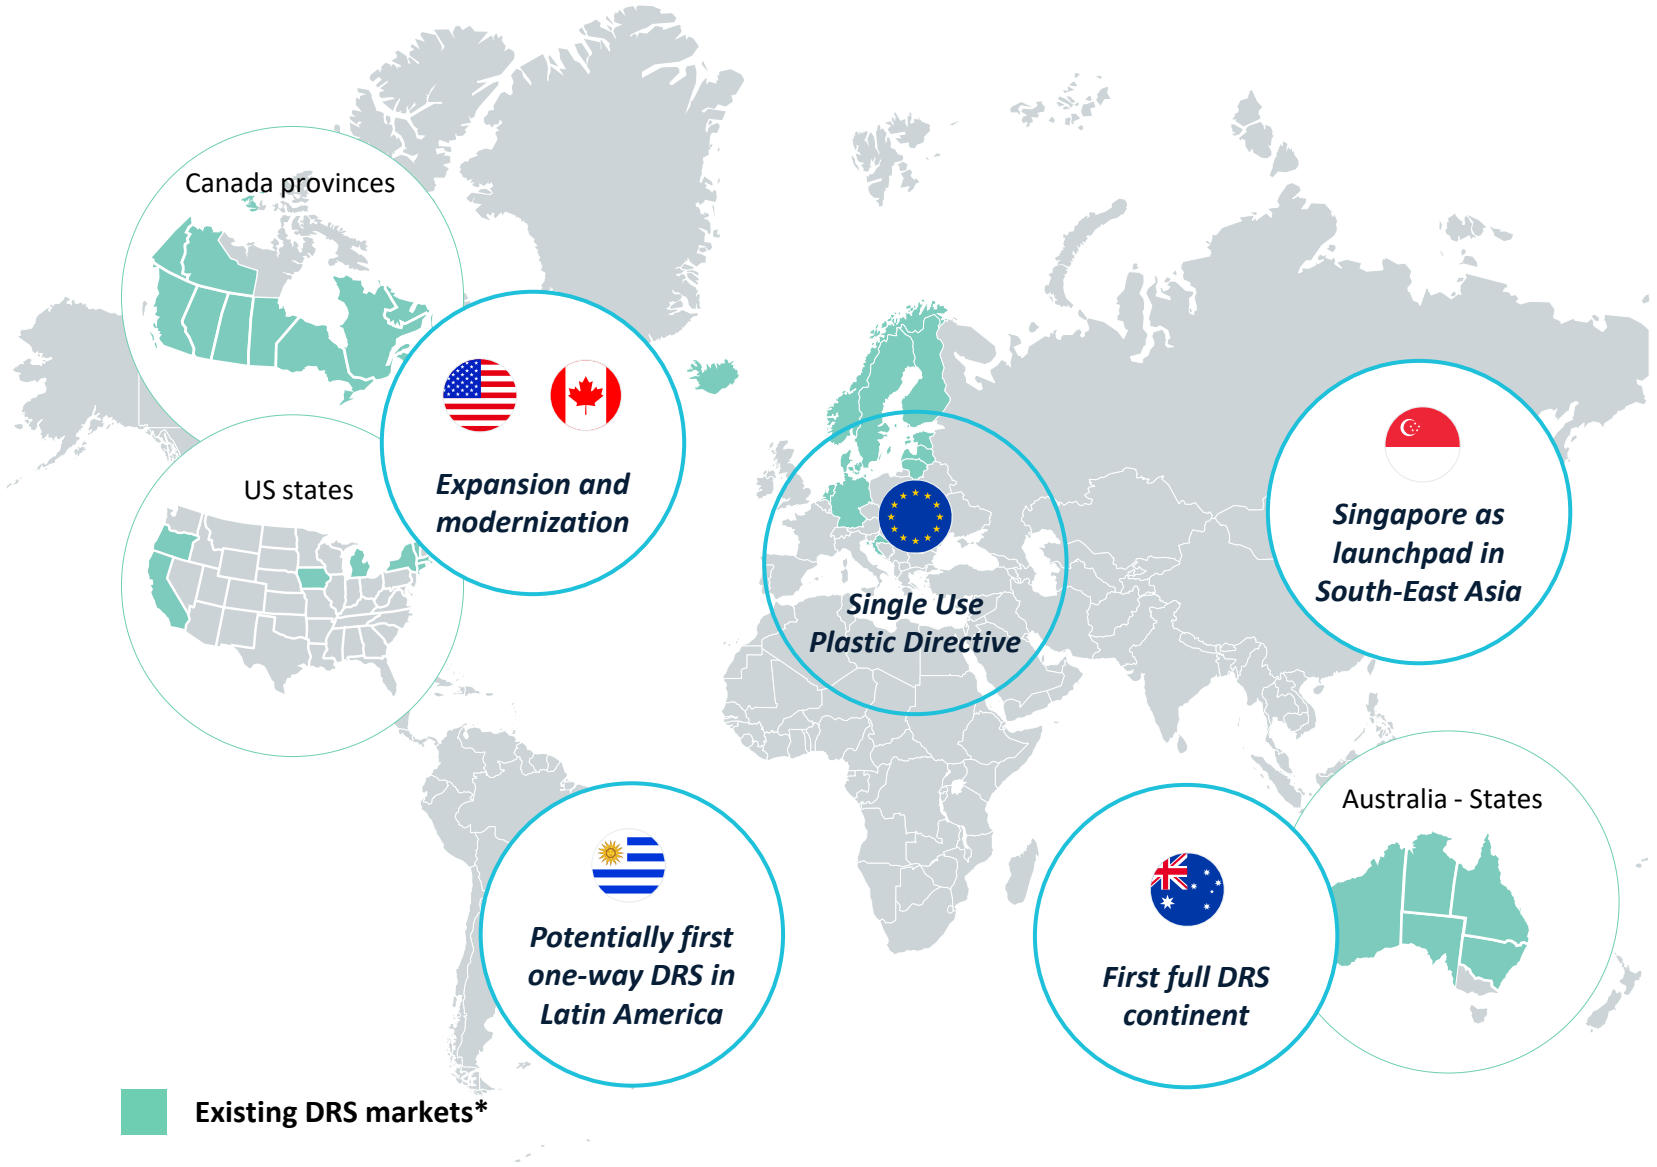
Trust is built into the system's processes through transparent management, a data-driven clearinghouse, and reliable redemption technology.

Reinvestment of unredeemed deposits and material revenue within the system

In Norway **over 80%** of the system's costs are covered by unredeemed deposits and material revenue



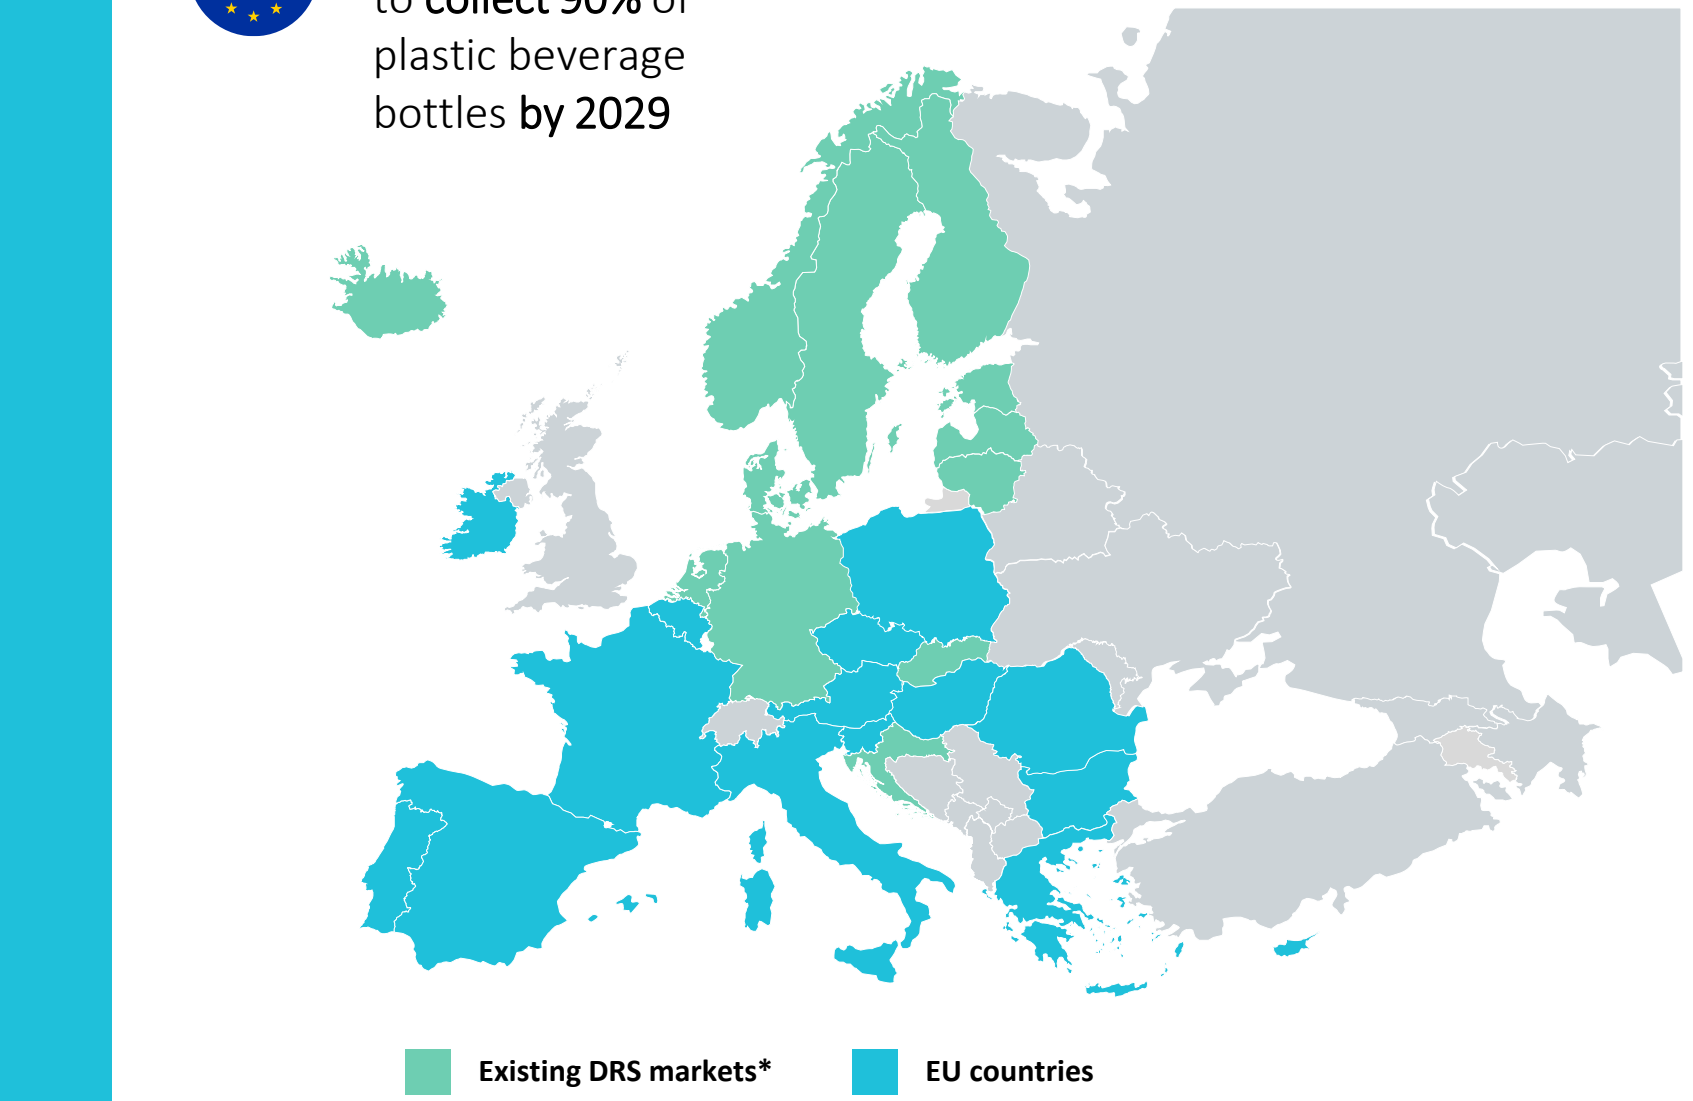
Legislative outlook supports new and expanded Deposit Return Scheme (DRS) markets towards 2030



* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Chile, Czech Republic, France, Hungary, Poland and South Korea

Europe and the Single Use Plastic Directive (SUPD) will be the main driver of new deposit markets towards 2030

All EU member states to **collect 90%** of plastic beverage bottles **by 2029**



* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Czech Republic, France, Hungary and Poland

Strong local presence in existing and upcoming European deposit markets

Establishing local TOMRA entities and building local presence and partnerships early is key in our go to market strategy

* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Czech Republic, France, Hungary and Poland

Our offering

Reverse vending machines

Reverse vending centres

Reverse vending machine kiosks

Digital products and APIs

Equipment for automated depots

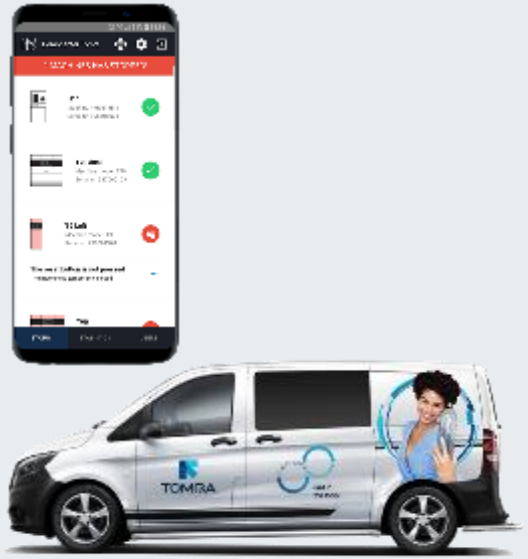
Customer centricity is at the core of our innovation strategy

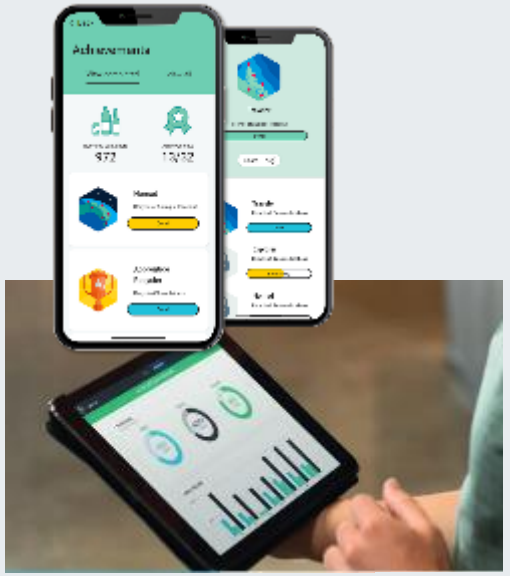
Strategic aspiration:
Innovate **the most attractive** solutions and the best customer experience

A great recycling experience

Efficient operations for peace of mind

A smart investment for long-term benefits





Preferred partner in reverse vending solutions

Business model expertise across deposit systems

Financing

Location: Retail ↑ Other

Sales & Service model

Retailer purchases and takes the ownership of the RVM and TOMRA provides services

- Upfront equipment revenue
- Recurring service revenues
- Proven track record
- Lower risk

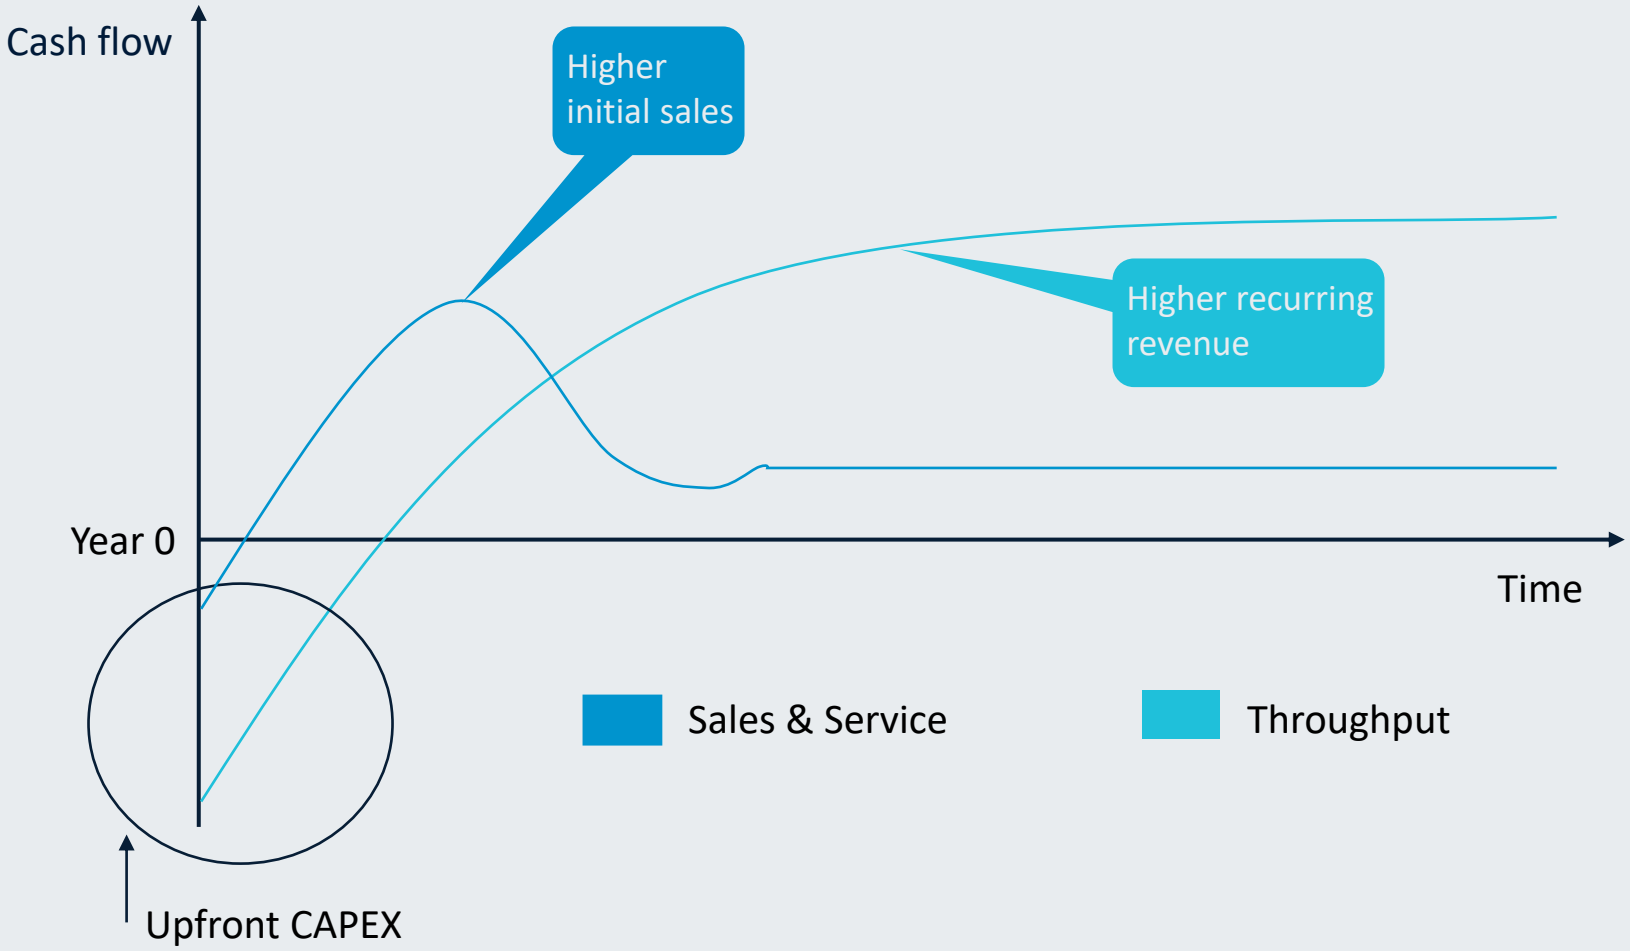
Throughput model

TOMRA owns and operates the RVM and receives a fee per container handled by the RVM

- High recurring Revenue
- Swift roll-out
- Aligned interests
- Utilize financial strength

Cash flow profiles of the two business models

Illustrative cash flow profiles per machine

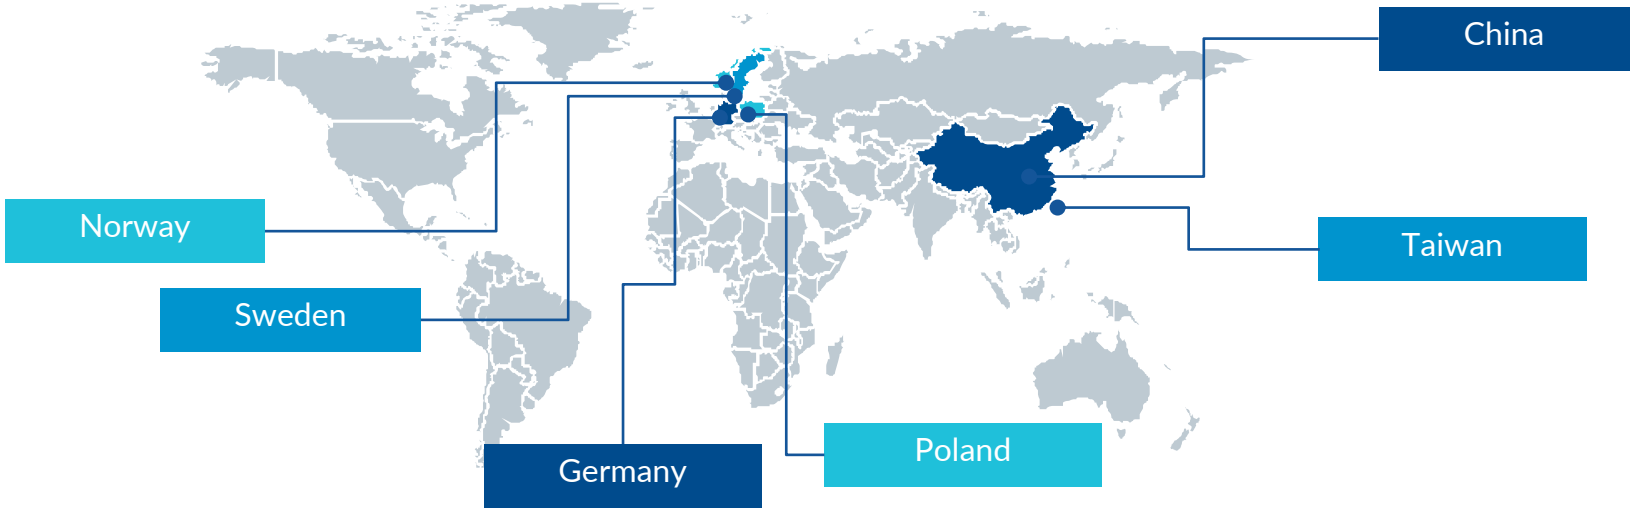


Advanced digital platform leveraged across stakeholder groups

Global Supply Chain

Optimize global sourcing and production set-up

Current supply chain with country origin on purchased material

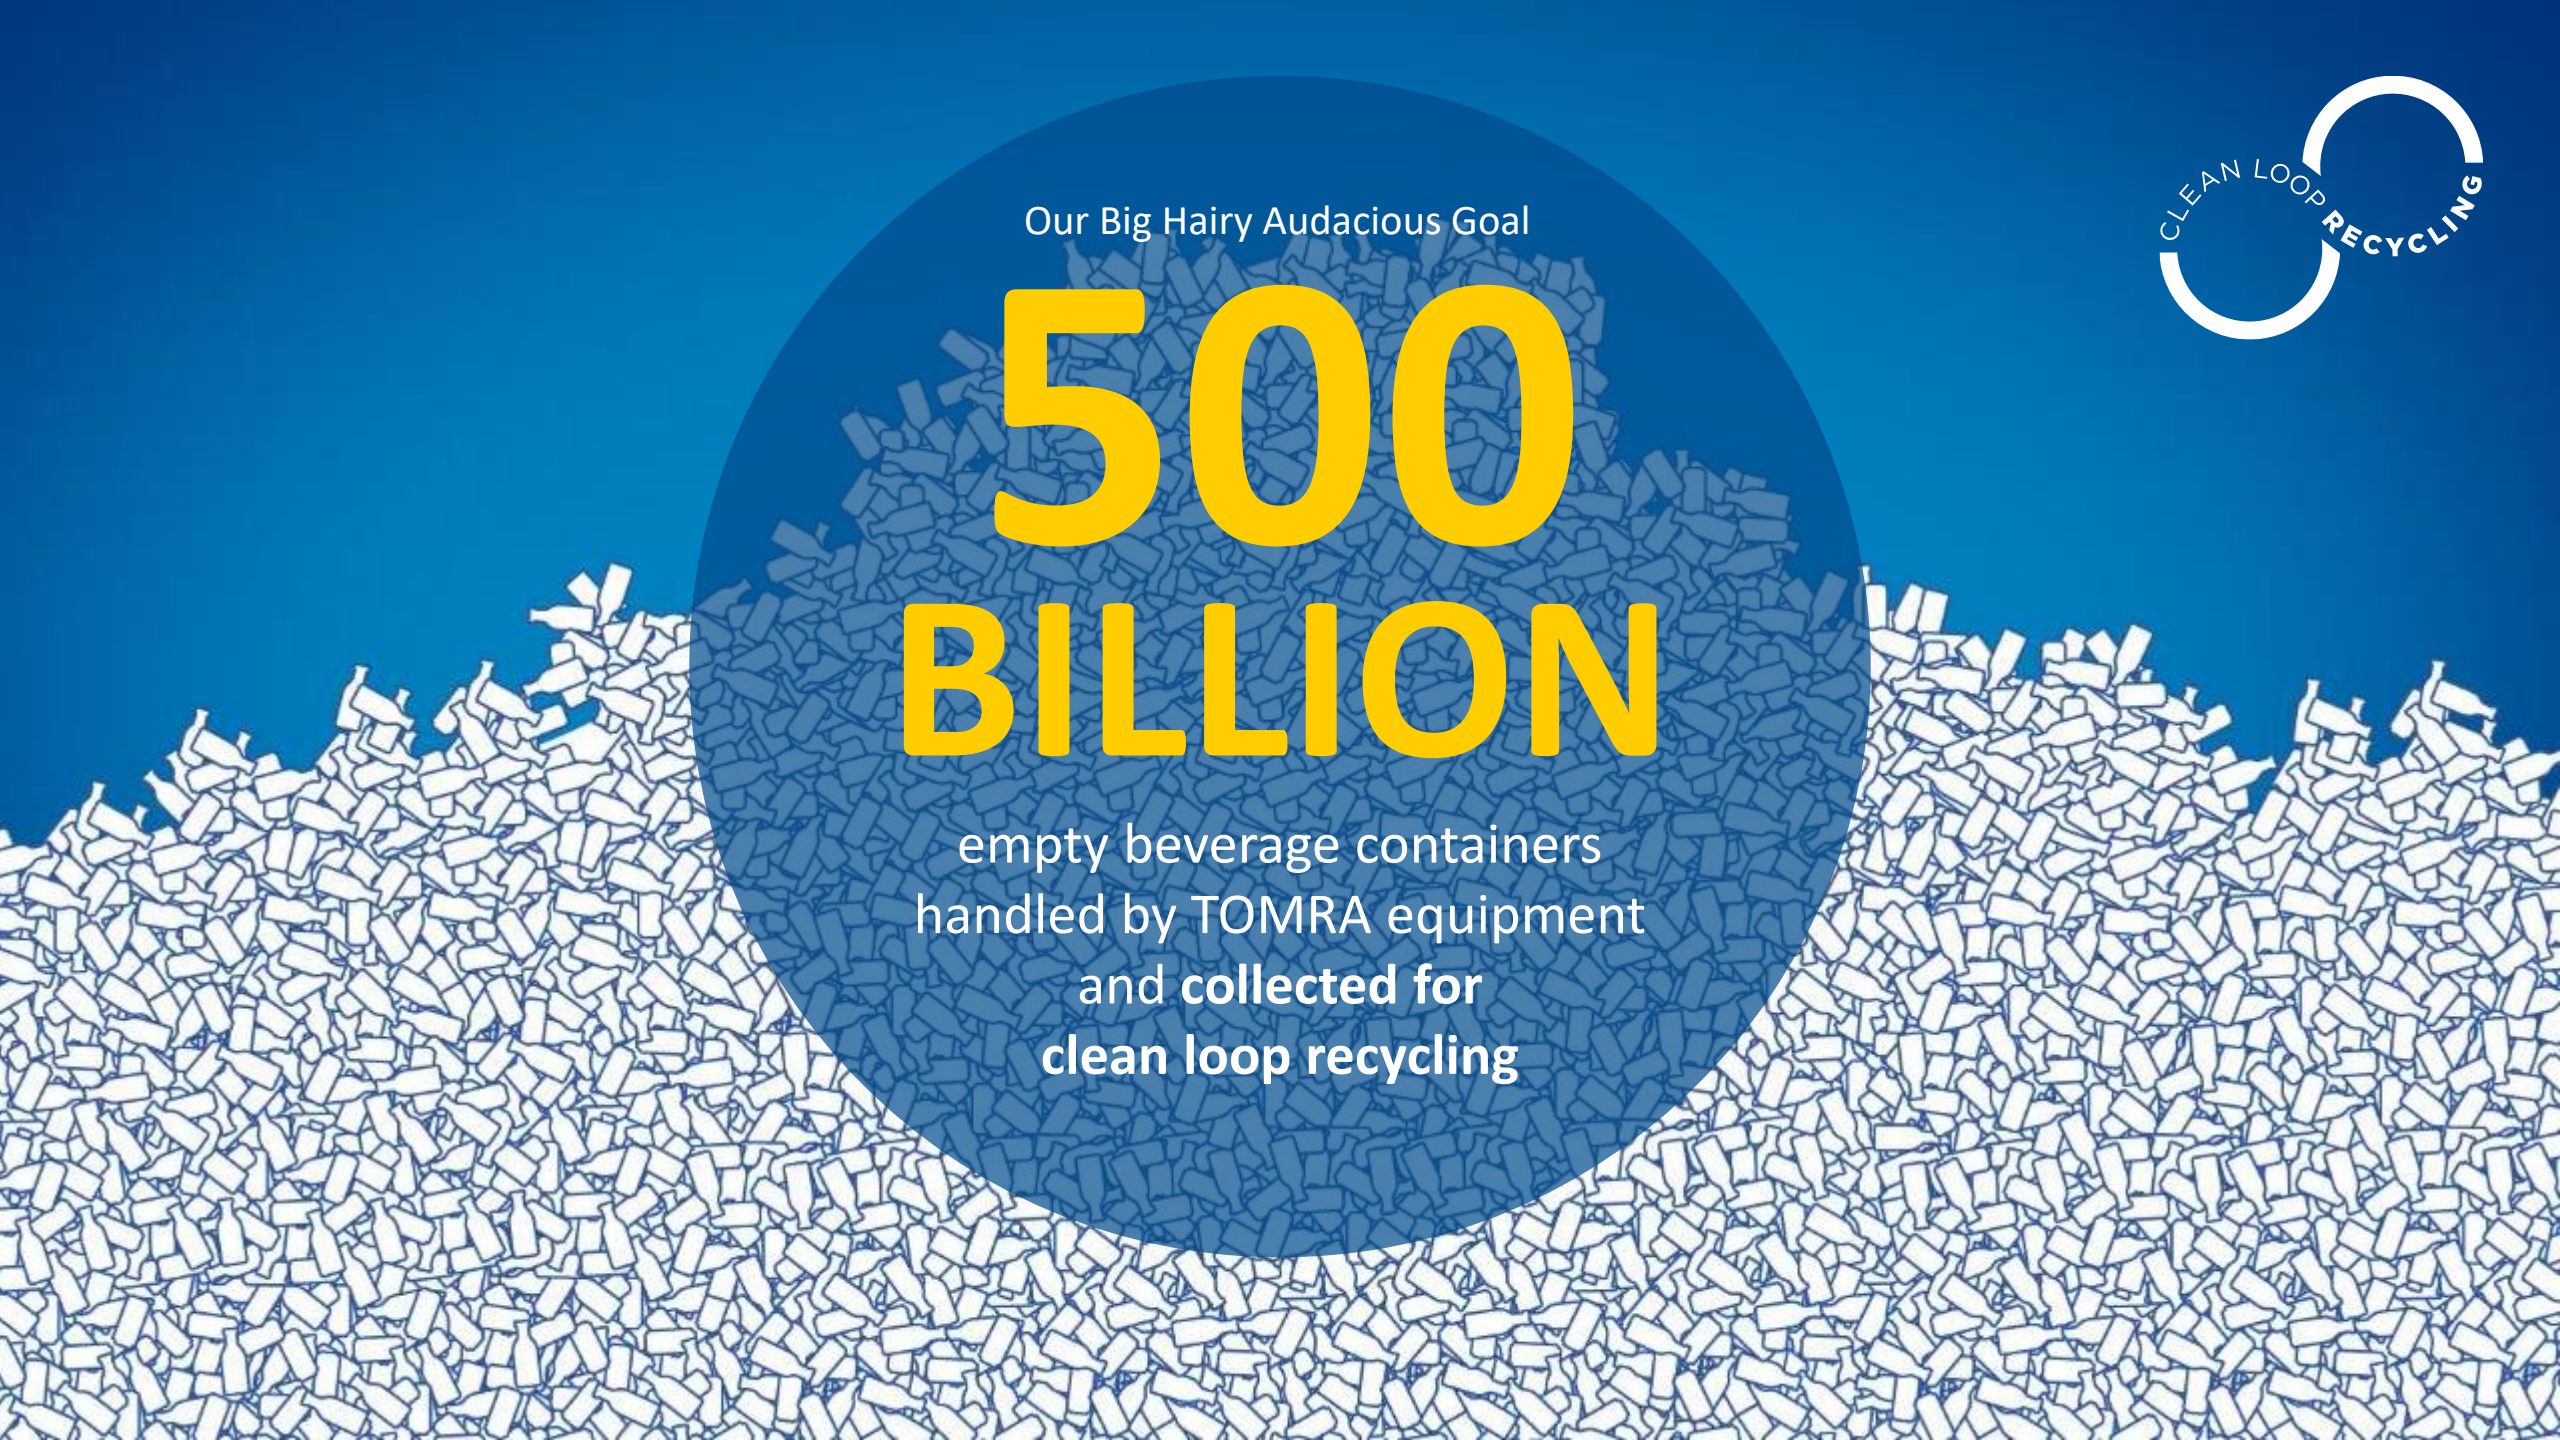


The goal

Support the market demands both on capacity and flexibility

Capable of annual delivery of up to 30.000 RVMs

Dual sourcing strategy in focus to reduce risk and exposure (increase European sourcing)



Our Big Hairy Audacious Goal
500
BILLION

and **collected for**
clean loop recycling
CLEAN LOOP RECYCLING

TOMRA Recycling

TOMRA Recycling

Transforming resource recovery through advanced waste and metals sorting that **turns waste into value.**

At least **33%** of waste is not managed in an environmentally safe manner

The world generates **2.01 billion** tons of municipal solid waste annually.

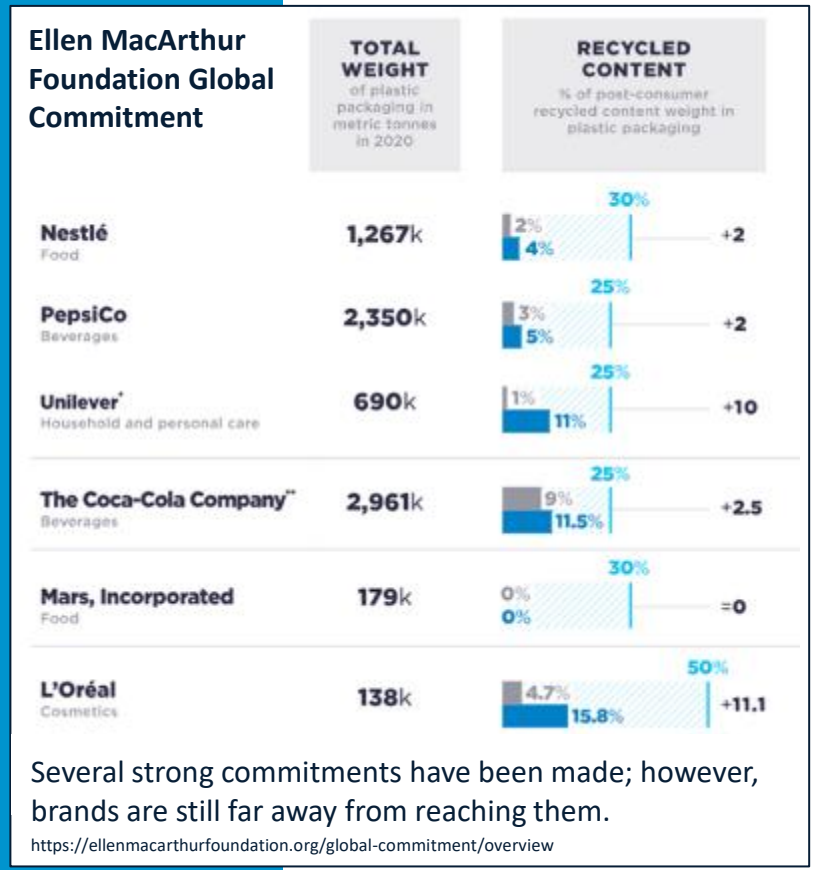
TOMRA's smart sorting machines **maximize resource recovery**

TOMRA

There is a legislative push and market pull towards a circular economy

Extended Producer Responsibility policy is a key element, complemented by quotas, taxes, bans, and mandatory recycled content targets.

https://www.rolandberger.com/en/Insights/Publications/Packaging-sustainability-2030.html

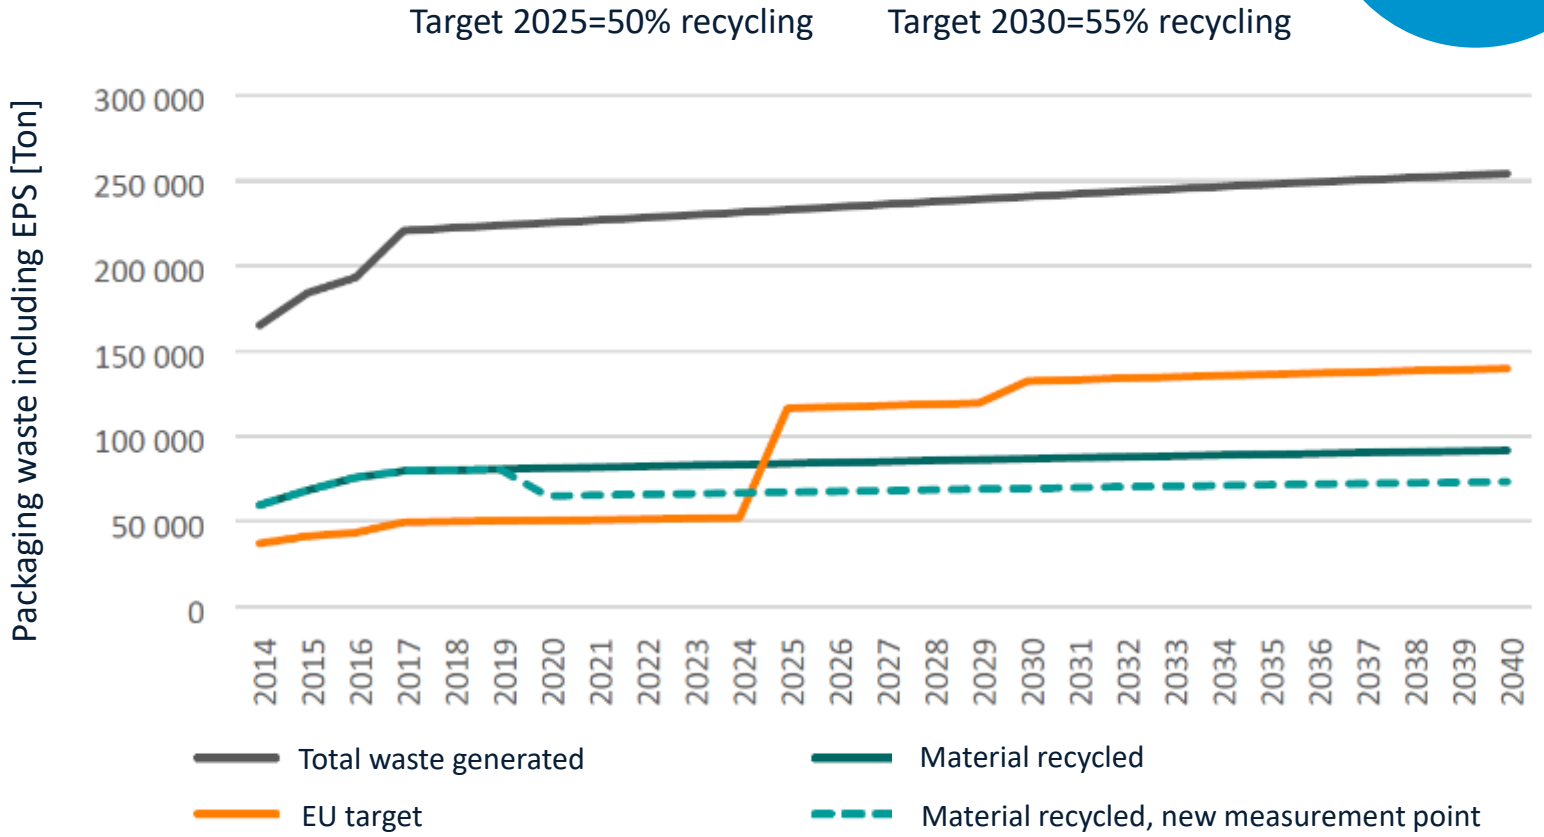


Several strong commitments have been made; however, brands are still far away from reaching them.

https://ellenmacarthurfoundation.org/global-commitment/overview

EU member states need to meet PPWD[1] targets for plastic recycling

Example: Norway



[1] Packaging and Packaging Waste Directive

Source: Utkast til høringsnotat med konsekvensutredning, Miljødirektoratet, February 27th 2020

Strong commitment from the industry to use recycled polymers

Selected global commitments (non-exhaustive)

"Our ambition is to use 1 million tons of plastic waste a year in our global chemical plants by 2025"

1 million tons

"Produce and market 2 million tons of recycled and renewable based polymers annually by 2030"

2 million tons

"Produce 2 million tons of sustainable (includes recycled and biobased) polyolefins by 2030"

2 million tons

"By 2030, Dow will enable 1 million tons of plastic to be collected, reused or recycled through its direct actions and partnerships"

1 million tons

+ others

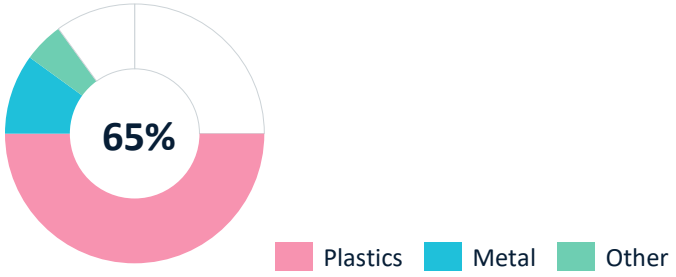
Sorting is essential for a circular economy

Waste sorting segment

Recover materials for recycling from both source separated and mixed household waste

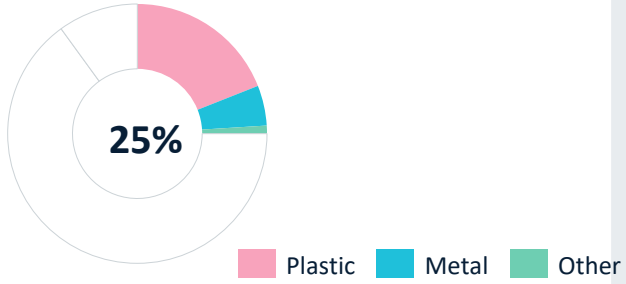
Segment share of installed base



Recycling segment

Upgrade material to pure fractions for high quality recycling

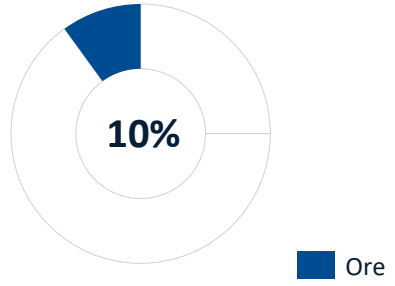
Segment share of installed base



Ore sorting segment

Recovery and ore sorting to reduce environmental impact

Segment share of installed base

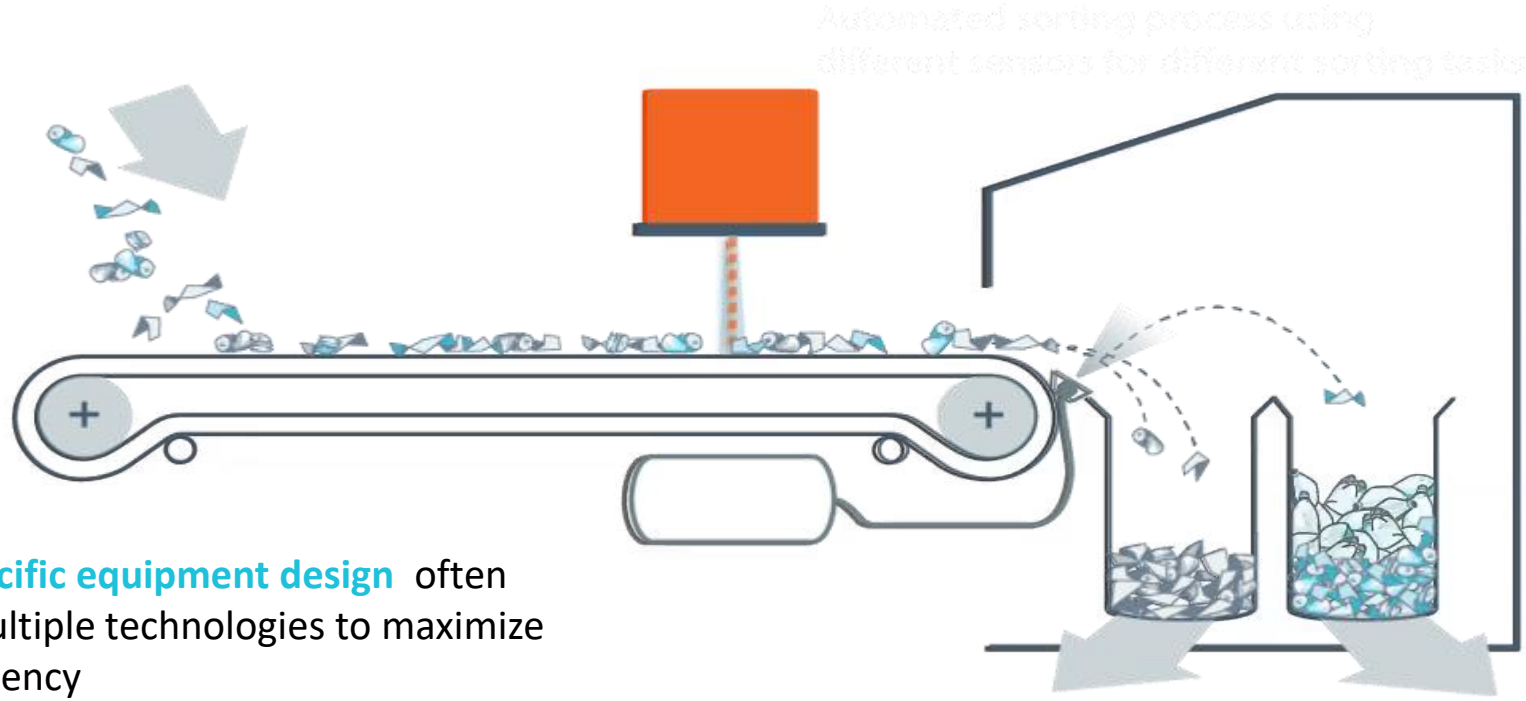


TOMRA

How does sensor-based separation work?

Feeding of
unsorted material

High-tech sensors to **identify objects**



Precise ejection by ultra fast air jets

Product specific equipment design often including multiple technologies to maximize sorting efficiency

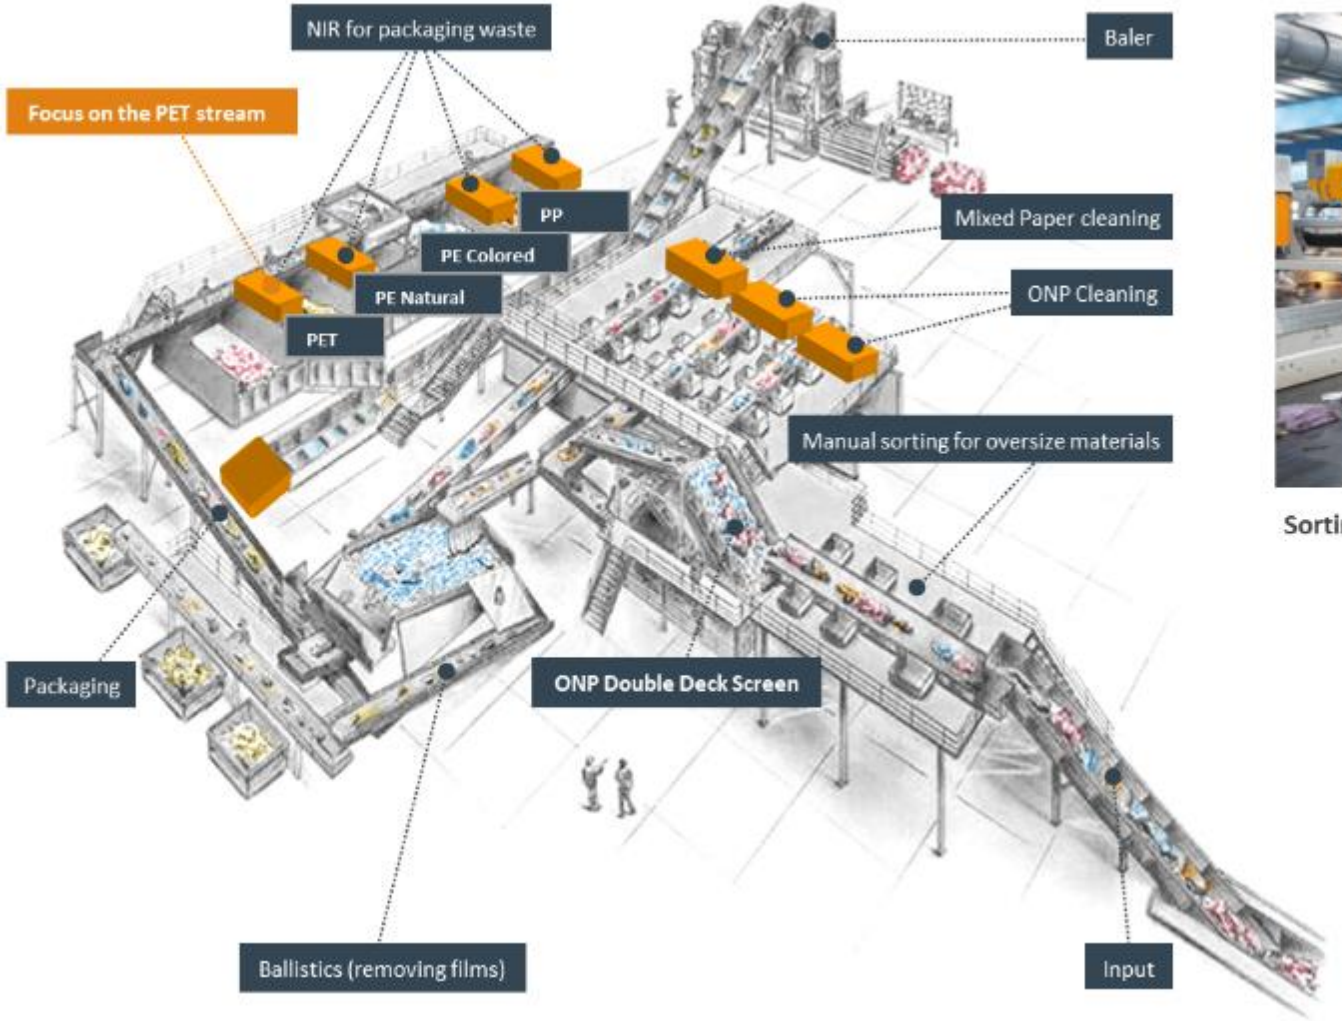
High-speed processing of information (material, shape, size, color, defect, damage and location of objects)

A broad sensor-based technology portfolio

	RECYCLING	FOOD
ELECTROMAGNETIC SENSOR (EM) Electro-magnetic properties like conductivity and permeability	X	X
LED SPECTOMETRY (LED) Color and spectral properties based on multiple LED light sources in very high optical resolution	X	X
NEAR-INFRARED SPECTROSCOPY (NIR) Specific and unique spectral properties of reflected light in the near-infrared spectrum	X	X
VISIBLE LIGHT SPECTROMETRY (VIS) Specific and unique spectral properties of reflected light in the visible spectrum	X	X
X-RAY TRANSMISSION (XRT) Atomic density irrespective of surface properties and thickness	X	X
LASER INDUCED BREAKDOWN SPECTROSCOPY (LIBS) Elemental composition	X	
X-RAY FLUORESCENCE (XRF) Elemental composition	X	
INFRARED TRANSMISSION (IRT) Density and shape properties by light absorption		X
IR CAMERA (IR) Heat conductivity and heat dissipation		X
COLOR CAMERA (COLOR) Color properties measured in very high optical resolution	X	X
LASER REFLECTION/FLUORESCENCE (LASER) Structural, elemental and biological properties by reflection, absorption and fluorescence of laser light	X	X

TOMRA

Automation with TOMRA units



Sorting of Municipal Solid Waste, Cyprus

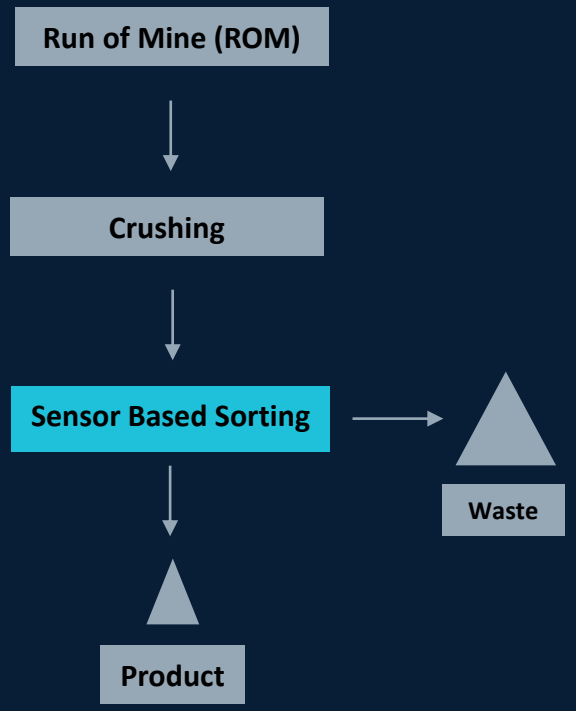
Our solutions enable recovery of recyclables from different waste streams

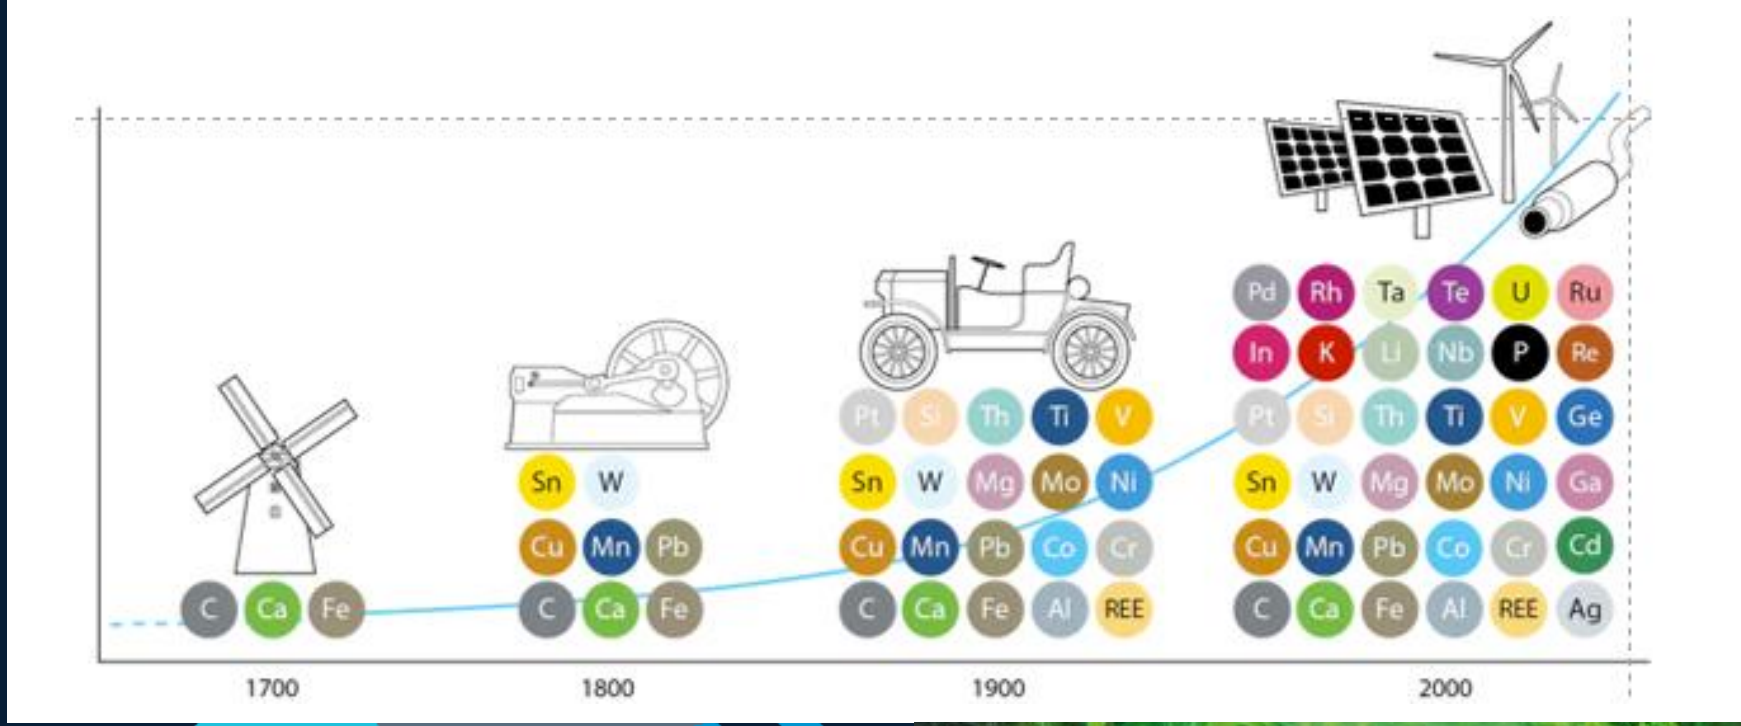
A modern packaging sorting plant can contain up to 60 NIR sorters

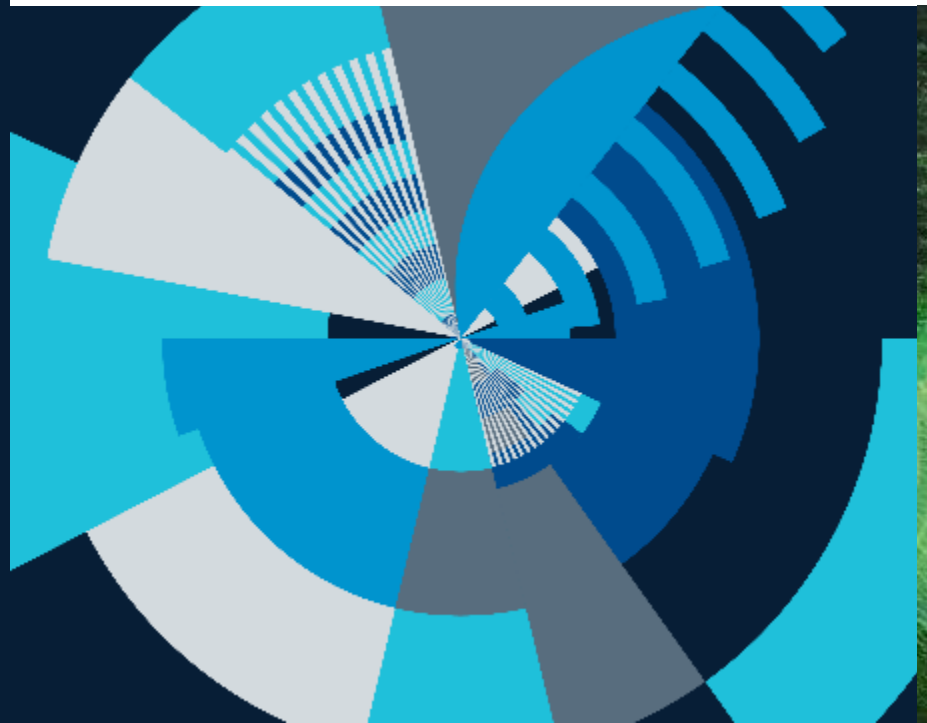
Our solutions can also recover valuables from residual waste streams

TOMRA

The essential nature of mining means that the industry needs to make a leap towards a more sustainable future







- *15% to 50% of the ROM can be rejected in an early stage of the process (application dependent)*
- *low grade waste rocks don't need to be transported, crushed, grinded, or further treated*

Our ore sorting solutions enable the mining industry to reduce their footprint

Ore sorting is used to:

- Reduce operational footprint by splitting the “good” and the “bad” materials early in the process
- Extend the lifetime of a mine
- Reclaim valuables for stockpiles

EFFECT OF SENSOR-BASED SORTING (SBS)	VALUE-ADD: ENVIRONMENT	VALUE-ADD: COST & PRODUCTIVITY	SAVINGS
Decreased energy consumption (Transport, pumping & dewatering, disposals)	✓	✓	• 15 kWh saved per ton of material • 2% to 3% of the world energy consumption is used for crushing, screening and milling
Decreased water consumption (Cooling, transport in the process)	✓	✓	• 3 to 4 m^3 water saved per ton of material
Reduced carbon footprint	✓	✓	• CO_2/Green counter, 7.5 kg per ton of material sorted • TOMRA Sorters saved ~124,000 metric tons of CO_2 in 2018
Decreased Transport cost		✓	• Costs down €0.30/ton/km
Chemical usage decrease (Flotation reagents, acid for leaching and cyanide)	✓	✓	• A few grams up to a few kilos per ton
Reduced tailings (fine particles)	✓	✓	• 3 m^3 tailings volume per ton (2 m^3 material plus 1 m^3 water)
Productivity increase (De-bottleneck conventional process)		✓	• Per ton of waste 1 additional ton of ore production
Lifetime of Mine increased	✓	✓	• 30-50% longer life of a mine
Waste into value (Create sellable product)	✓	✓	• The coarse waste rejected can be sold (for a low price)
Legislation		✓	• Up to 3 years quicker approvals
Reduced cut-off grade (Higher dilution in the mine, process marginal dumps)		✓	• 30-50% more reserves

Our technology and innovations continue to push the boundaries of the recycling sorting market

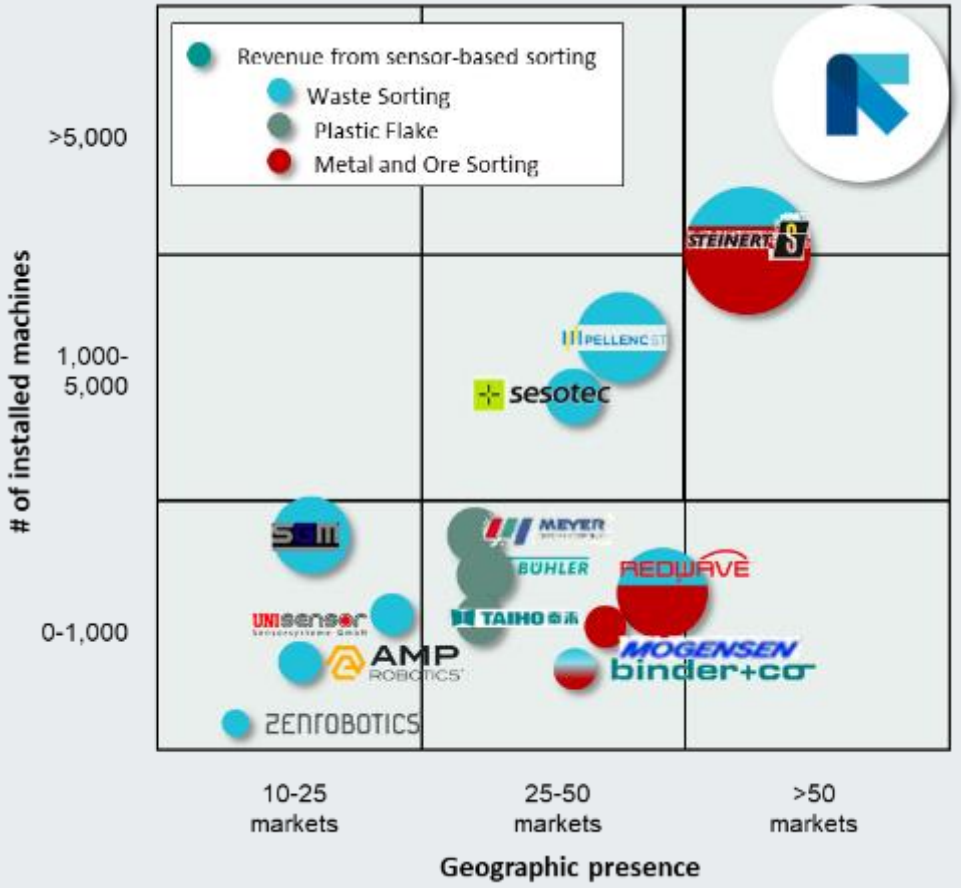
New segments for automated sorting

Increase of automation and performance

Capacity growth

Recycling sensor-based sorting equipment market

Out of scope for TOMRA addressable market: other non-sensor-based sorting equipment (magnets, ballistics, eddy currents), other waste processing equipment

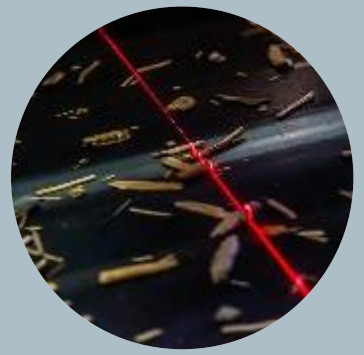


Our solutions close the loop by enabling high quality recycling

Plastics

We are actively pushing the boundaries of plastics recycling by:

- Demonstrating advanced mechanical recycling
- Supporting chemical recyclers



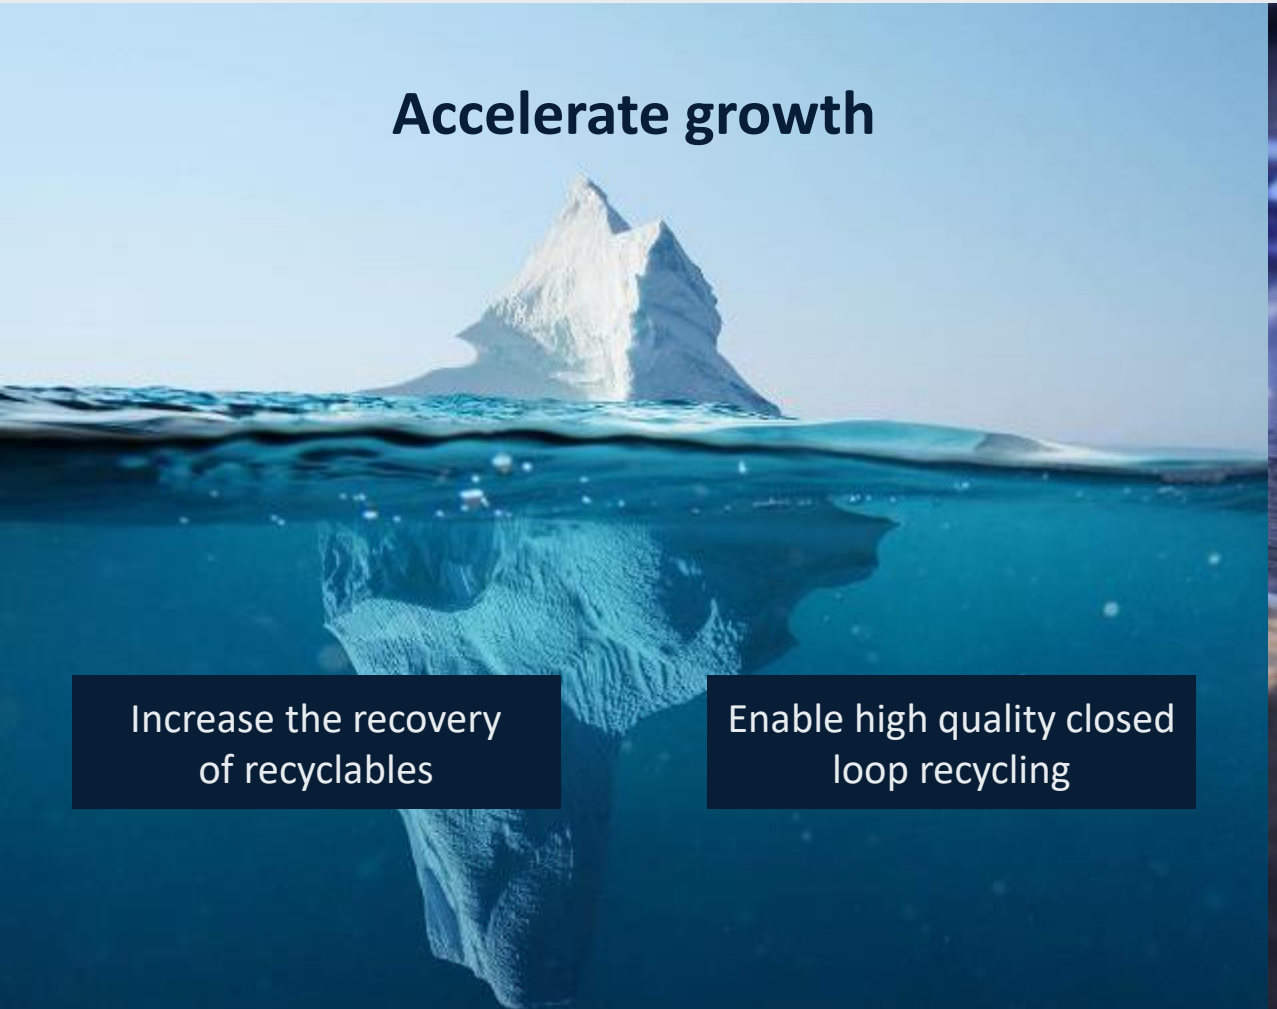
Wood sorting

Textile sorting

Alloy sorting

We are investing into the development of solutions for new segments

We have two strategic priority areas



Accelerate growth

- Increase the recovery of recyclables
- Enable high quality closed loop recycling

Provide leading solutions and innovations

- Utilize cutting edge sensor technology
- Exploit the power of deep learning
- Deep market expertise and partnership
- Develop digital solutions & services

We are here to enable closed loop recycling solutions - material stream by material stream

Our commitment towards plastic packaging by 2030

30%

of post-consumer plastic packaging is recycled in a closed-loop

TOMRA Food

TOMRA Food

Transforming global food production to maximize food safety and minimize food loss by making sure **Every Resource Counts™**.

Currently, **33%** of all food produced is either lost or wasted

By 2050, a global population of **9.8 billion** will need **70%** more food than is consumed today

We have ambitions to enable a post-harvest **food loss reduction of 50%** by 2030

TOMRA

Robust drivers supporting the market

North America, Europe and Oceania

Latin America and South Africa

Asia

Automation Potential (illustrative)

Potential

Current level

- Population growth and rise of the middle class
- Continued loss and waste of food
- Shift to automation and digital tools
- Cyclical investments in different categories, regions and seasons

TOMRA Food with a strong value proposition

Why Automate

Why TOMRA

Know-how

Expertise to transform the food industry

Technology

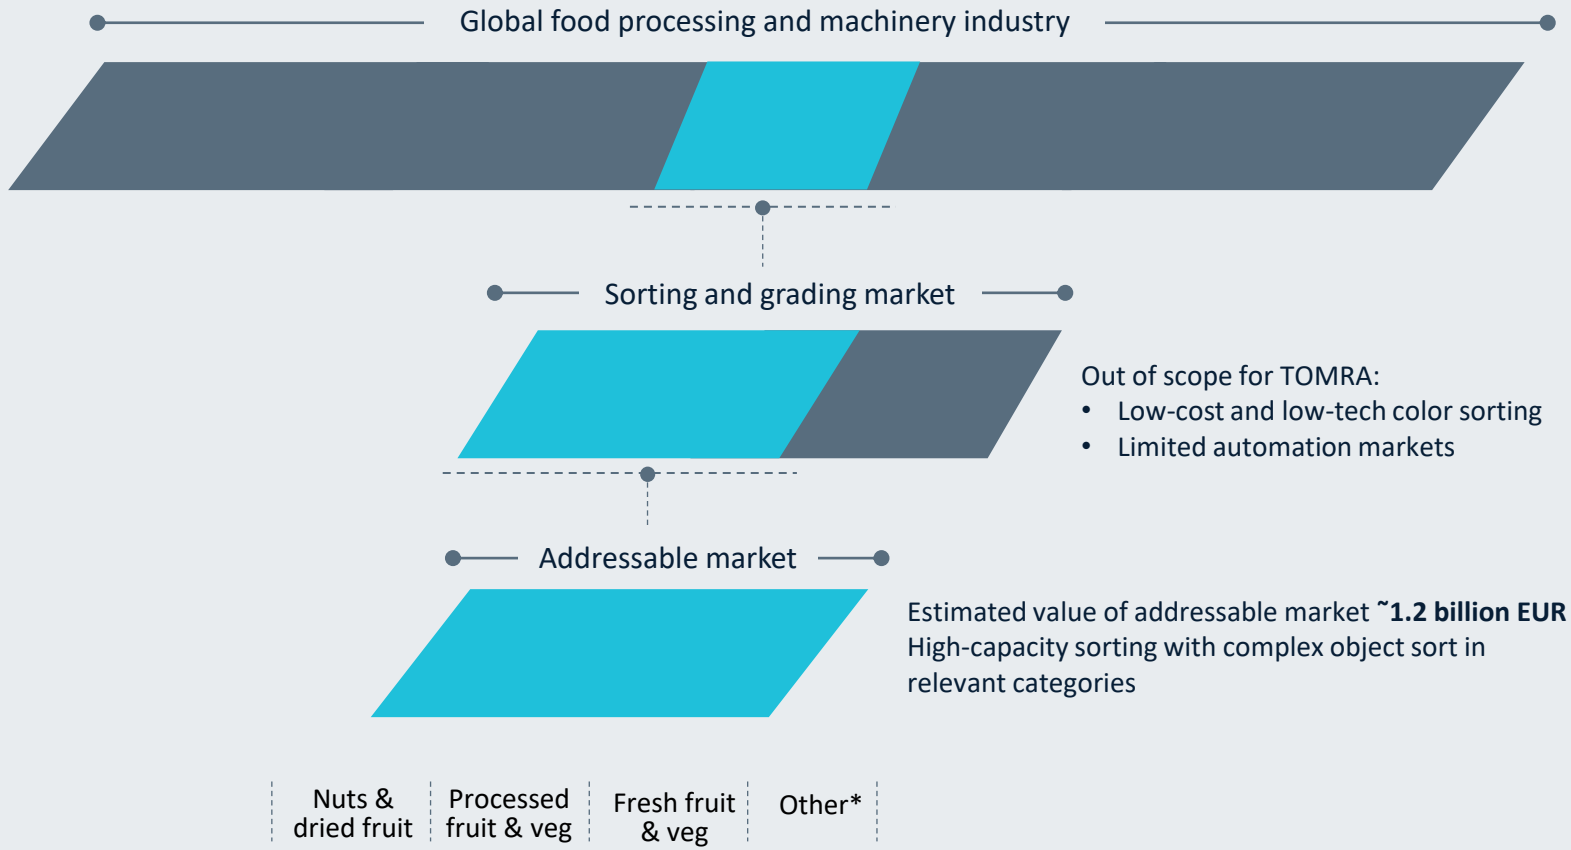
Best-in-class sorting and grading solutions, and digital insight

Partnerships

With local understanding, global know-how and long-term relationships

Market position and addressable market

We are addressing approximately 60% of the total food sorting and grading market



*includes protein, pet food, confectionary, etc.

Our Technology…

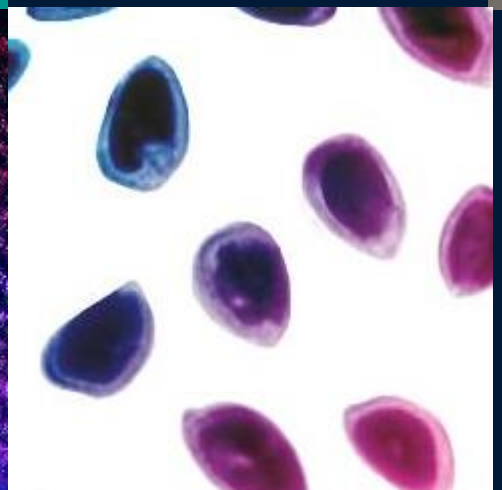
Camera

Laser

Digital

Pulsed LED

Spectroscopy



X-ray

...are detecting a wide range of parameters

Foreign Material

Removal of foreign material in a material stream, e.g. insects, glass, metal, wood & plastics

Blemishes

Objects with spots or other (small) blemishes are removed

Toxins

Removal of produce contaminated with aflatoxin

Structure

Removal of soft, molded or rotten food

Biometric Characteristics

Sort based on chemical composition such as water, protein content, sugar content (Brix) and dry matter

Shape & Size

Sort on length, width, diameter, area, broken-piece recognition

Color

Grading by color or removal of discolorations in mono- and mixed-color material

Defects

Removal of visible and invisible small and substantial defects

Damage

Broken, split and damaged objects are detected and removed

Fluo

Based on the chlorophyll level present in produce defects are removed

Density

Detection of density differences

- **Visible**
- **Invisible**
- **Both**

Working principles in Food sorting

TOMRA INSIGHT

Our strategy is to
accelerate growth in core
business
and
develop adjacent
opportunities

Ideally positioned to develop adjacent opportunities

TOMRA's competitive edge, market position and technology can be applied in areas beyond our current operations

Strong macro trends and emerging business models within **circular economy** and **resource efficiency**

Closing the gap in plastic recycling
Close the loop on textiles
Positioned to develop adjacent opportunities
Systems for reusable packaging

Legislative push to advance circularity

Recycled content

EU's Packaging & Packaging Waste Regulation (proposed)

% of post-consumer recycled content in packaging

	2030	2040
Single use plastic beverage bottles	30%	65%
Contact-sensitive packaging	30%*	50%
Other types of packaging	35%	65%

* 10% if PET is not major component

Reuse and refill

EU's Packaging & Packaging Waste Regulation (proposed)

% of reusable Take-away packaging

	2030	2040
Cold & hot beverages	20%	80%
Ready prepared food	10%	40%

National legislation on take-away packaging

France 1 January 2023:
Mandatory reusable tableware for dine-in

Germany 1 January 2023:
Mandatory reusable take-away alternatives

Sweden 1 January 2024:
Mandatory reusable take-away alternatives

Denmark 1 January 2025:
Introduction of EPR packaging fees

Portugal 1 July 2022:
Tax on single use take-away packaging

The gap in plastics recycling

Majority of plastics are lost today

- In Europe alone, 24 million tons of plastics are lost to incineration and 14 million tons to landfill
- The volume of each waste plant and incinerator is too low for sophisticated sorting to ensure the quality and fractions required for recycling

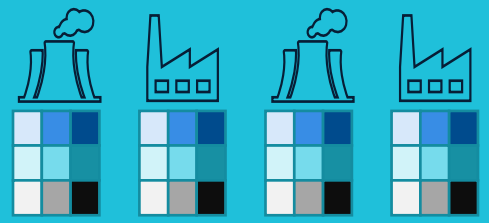
GAP

Demand for recycled plastics

- Already a strong demand for recycled plastics will increase significantly in the next few years (more than 10 million tons from major plastic producers)
- Mechanical and chemical recyclers need an individual polymer fraction at sizeable volumes to justify investments

TOMRA

Input



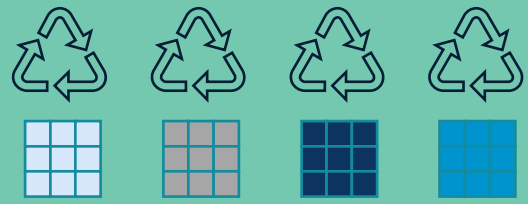
Mixed plastics fraction sourced from material recovery facilities

TOMRA Feedstock

Advanced sorting

Dry washing

Output



High quality polymer fractions to be supplied to recyclers (PE, PE-LD, PP, PS, PET, film)

TOMRA Feedstock Plants

Germany

- Announced 19 December 2022
- 100% TOMRA owned
- EUR ~ 50-60 million investment
- Capacity ~ 80.000 tons p.a.
- Input: mixed post-consumer plastic
- Output: >10 different polymer fractions for mechanical and chemical recycling
- Operational in 2024-2025 est.

Norway

- Announced 31 May 2023
- Joint Venture 65% TOMRA / 35% Plastretur
- EUR ~ 32 million investment
- Capacity ~ 90.000 tons p.a.
- Input: mixed post-consumer plastic
- Output: 8 different polymer fractions for mechanical and chemical recycling
- Operational in the first quarter 2025 est.

Collaboration with Aarhus Municipality in Denmark on a deposit system for takeaway packaging

AARHUS KOMMUNE

Aarhus indfører pant på takeaway-emballage

Vi bruger ca. 300 millioner engangskopper og 150 millioner engangsbokse til takeaway om året i Danmark. Som den første kommune i landet er Aarhus klar til at indføre pant på takeaway-emballage. Målet er at skabe et cirkulært system, hvor emballagen bliver indsamlet, vasket og genbrugt.

Aarhus Docklands. Credits: Roar Paaske, VisitDenmark.

The Green Bond Principles

°CICERO Dark Green

Use of proceeds

ICMA category: Pollution prevention and control	
Expenditures related to:	Examples of eligible assets:
Collection, sorting and processing of beverage containers	• Manufacturing, installation, maintenance, and operation of reverse vending machines (RVMs) • Sorting and processing facilities • R&D related to the development and design of RVMs • Collection systems for reusable packaging • Outreach to raise awareness and support for deposit return schemes
Recovery and upgrading of valuable materials from waste streams for recycling	• Software development for waste sorting machines • Assembly lines for manufacturing of sorting machines • R&D to improve performance or enable sorting of new types of materials (e.g., textiles) • Investments in the sorting and processing of post-consumer materials
Minimizing the carbon footprint of operations	• Renewable energy equipment • Clean transportation • R&D to increase the use of sustainable materials

Highlights form Cicero Second Party Opinion

"TOMRA's RVMs and waste sorting machines are **well-aligned with circular economy solutions and a low-carbon future"**

By improving material recovery for recycling and reuse, TOMRA's RVMs and waste sorting machines are an **important contribution to the climate transition, a more circular economy, and improved waste management**"

"RVM solutions have the potential to **limit climate emissions, local pollution, and harmful biodiversity impacts**"

"TOMRA has **significantly strengthened** its sustainability strategies"

"The overall assessment of TOMRA's **governance structure** and processes gives it a rating of **Good**."

°CICERO Shades of Green

Dark Green is allocated to projects and solutions that correspond to the long-term vision of a low-carbon and climate resilient future.

Our sustainability commitment

Leading the Resource Revolution while becoming a fully circular business and being safe, fair and inclusive

TOMRA

Our 2030 Sustainability Targets

- Double the avoided emissions enabled by TOMRA products in use
- Commitment to Net Zero emissions and setting Science Based Targets (to be externally verified by 2024)
- 100% renewable electricity
- >80% reduction in operational transport emissions
- >90% sustainable materials and components in all new products
- >50% of our products are circular at their end of life
- Strive for zero work-related injuries and illness in providing a safe place for people and the environment
- Attract diverse talents from all facets of humanity, with a goal of 50% women and men joining annually
- Grow female representation in senior management to >30%
- Improve employee satisfaction and engagement with top quartile NPS Score
- Supply Chain Sustainability targets will be announced in 2023
